Subject: Materials Posted for Sep 21 and 22 Capacity Auction Enhancements General and Technical sessions

Good Afternoon,

This email is being directed to stakeholders following along on the 2023 Capacity Auction Enhancements engagement initiative.

The materials for the September 21 and 22 Capacity Auction Enhancements General and Technical sessions are now posted to the [engagement webpage](#).

The September 21 General Session will cover responses to stakeholder feedback that was submitted after the August 2022 engagement sessions, an update on engagement timelines, the results of the HDR standby trigger review, a Forward Capacity Auction update, and a request for stakeholder feedback on the audit process.

The September 22 Technical Session will discuss a revised standby availability charge proposal and alternative proposals to the charge proposed by stakeholders and details of the IESO's proposal to address the impact of forced contributor outages in HDR performance assessment. In addition to providing responses to stakeholder feedback on the engagement topics covered in this month's engagement sessions, the IESO is continuing to review feedback and develop responses to all stakeholder feedback which will be posted on the CA engagement webpage prior to the October engagement sessions. We encourage stakeholders to review the engagement materials in advance of the engagement sessions next week and look forward to the discussion.

Regards,
IESO Engagement
