From: Dave Butters
RE: September 21, 2017 SSM meeting: Phase II - Options and Preliminary Decisions

Priority:

APPRO has reviewed the Price Formation Options and Design Element Options questions posed by the IESO at the September 21st meeting.

At this time we have no further comments to make. APPRO agrees generally with the conclusions and directions presented by the IESO.

Since many of the Options are binary in nature (i.e., they are required by an SSM), we suggest that they be taken on board as “given”, allowing stakeholders to concentrate on the next level of detail, as well as allowing for further discussions on issues where there are different option choices and/or views among market participants.

As expressed in our earlier comments on market renewal, it is critical that all options be examined carefully to ensure that suppliers are not economically disadvantaged compared to their contracts, and appropriate mitigation measures are devised where appropriate.
