IESO Technical Panel

Re: GCR- MR-00497-R00

The Goreway Power Station ("Goreway") is an 875 MW natural gas fuelled, combined cycle generation facility. It is active in the Ontario electricity market and has participated in the development of the Association of Power Producers of Ontario's ("APPrO") position on the GCR, including the development of alternative governance models and the APPrO proposed GCR.

Goreway appreciates the IESO's willingness to accommodate concerns respecting governance issues in the GCR and in refining its original approach. Goreway believes that the draft GCR can continue to be improved in the following areas:

- Expressly recognizing a "legitimate business purpose" defence for market participants;
- Removing the effective exclusion of IESO activities from the scope of the rule;
- Providing greater clarity in the specified offences; and
- A more appropriate and meaningful limitations period.

To this end, Goreway supports the APPrO submissions on the proposed GCR.

Goreway looks forward to continuing to contribute to the development of a GCR that meets the public interest in a balanced and even-handed manner.

Sincerely,

A handwritten signature in black ink, appearing to read "Melanie Maddix".
