Request for Comments on Transitional Demand Response Program

1. Why cap program at 100 MW. I thought the IMO is looking for as much demand response as possible.
2. Why restrict each load to 5 MW. Same reason as #1 above.
3. HADL was a manual system and did not have restrictions on MWs.
4. Why are the non dispatchable portions of a dispatchable load not eligible for the program.
5. Demand response load should qualify for operating reserve.
