

## Pre-Dispatch Price Data for TDRP (April 2005)

### Live Pre-dispatch data on the IESO public FTP site

The pre-dispatch price data can be found in the PredispUnconsEnergyPrice folder on the IESO public FTP site (<ftp://aftp.ieso.ca/pub/reports/PUB/PredispUnconsEnergyPrice/>). The files in this folder are published approximately 15 minutes after each hour and are created on an hourly basis. When a new pre-dispatch report is published, the information for all future hours is overwritten with a new pre-dispatch value, and the data for previous hours remains unchanged.

As a result of the pre-dispatch files being overwritten, to obtain the 3 hour ahead pre-dispatch price used for TDRP participation you will need to extract the 3 hour ahead price each hour before the information is overwritten with new data. For example, if you would like the 3 hour ahead pre-dispatch price for HE20 you would need to retrieve the pre-dispatch price report published around 16:20, before it is overwritten at 17:20.

## **Pre-dispatch Data on the Market Summaries Page**

<http://www.ieso.ca/imoweb/marketdata/marketSummary.asp>

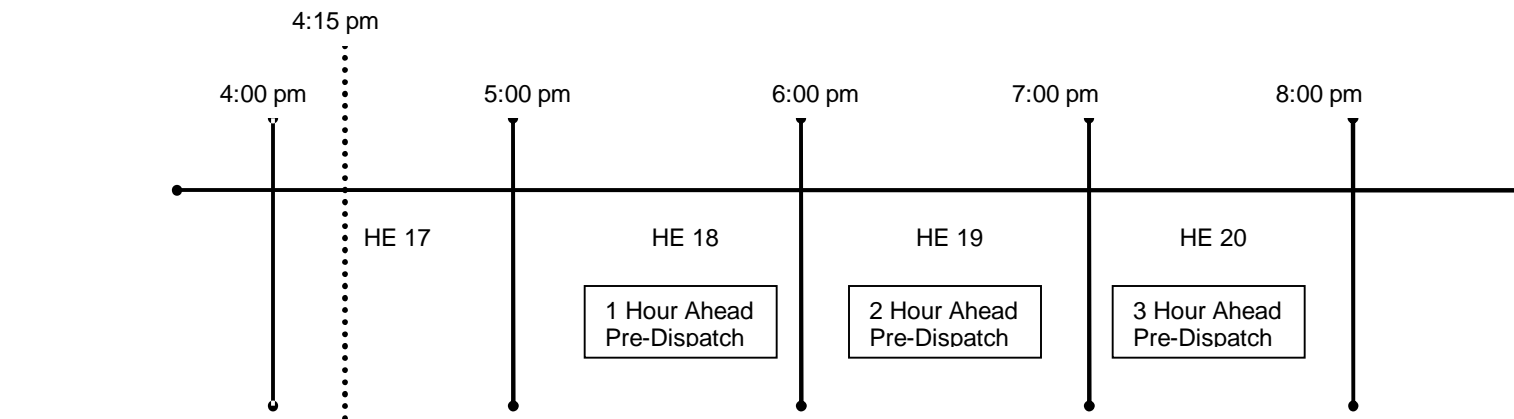

The data provided on the Market Summaries page of the IESO website is published on a weekly basis and contains the pre-dispatch price information for all hours of every day since market opening. The purpose of this data is to supply TDRP participants with the necessary data to estimate potential revenues and frequency of participation opportunities. This data is not meant to be used for settlement or reconciliation purposes. The above mentioned data from the IESO public FTP site should be used for those purposes.

### **How to read the report**

In this file, there is an HOEP, 1 hour ahead, 2 hour ahead and 3 hour ahead pre-dispatch price reported for each hour of the day. Each price reported is the price that would have been in effect for the respective hour, not the hour the data was published in. For example, the 3 hour ahead pre-dispatch price for HE 20 is recorded as \$120.00. This indicates that HE20 was a possible TDRP participation hour. This data point would have been extracted from the pre-dispatch report that was published during HE 17 (approximately 4:20).

### **How the report is created**

The data in this report is extracted from the pre-dispatch report discussed above. Each hour when a new pre-dispatch report is published the most recent 3 hour ahead pre-dispatch price is recorded in the appropriate cell. For example, a pre-dispatch report is published around 4:20 pm, representing HE 17. This file would contain the 3 hour ahead pre-dispatch price for HE 20, and it is recorded in the appropriate cell in the spreadsheet. This process continues for every hour of the day when new pre-dispatch report is published containing a new 3 hour ahead pre-dispatch price. Please see the following illustration.

Hour	16	17	18	19	20
Price	53.08	53.04	54.31	63.11	120.00

4:15 pm; the pre-dispatch report is published for HE17

Hour	HOEP	1 Hr Predispatch	2 Hr	3 Hr
17	52.8	53.04	52.57	51.92
18	57.58	54.31	54.78	55.4
19	80.12	63.72	63.11	60.24
20	68.56	60	53.76	120.00
21	51.05	60.86	56.27	53.25
22	46.4	56.62	56.62	57.88
23	43.55	55.01	57.02	57.26
24	36.57	39.7	40.01	39.12

5:15 pm; the pre-dispatch report is published for HE18

Hour	16	17	18	19	20	21
Price	53.08	53.04	54.31	63.72	53.76	53.25

1 Hour Ahead Pre-Dispatch

2 Hour Ahead Pre-Dispatch

3 Hour Ahead Pre-Dispatch
