Dear Sir/Madam

Re: SE-57  
Embedded Generation Discussion Paper

Thank you for the opportunity to comment on the above named IESO discussion paper.

Enersource Hydro Mississauga Inc. has two questions in this matter:

1. Is the IESO uniquely suited to acquiring information and monitoring embedded generator's operations or could another market participant serve in this capacity?
2. What are the IESO's 'visibility' requirements?

The first question is raised to encourage consideration of the role that other market participants other than the IESO, such as aggregators, could play a role; for example, an aggregator could facilitate the provision of information to the IESO in an appropriate form. The second question is raised in order to better understand the need for, and materiality of, 'visibility'; for example, it is not clear whether the IESO requires 'visibility' of embedded generators at the point that their output is injected into the grid, or that the IESO's need for 'visibility' is confined to a material amount (eg., relative to the IESO's forecast error).

Please do not hesitate to contact me if you require further information.

Sincerely

*K. Litt*
