Wind Capacity Contribution Forecasting Method: IESO Decision

Khaqan Khan

Wind Power Standing Committee (WPSC)

November 5, 2008

- IESO will implement the proposed Wind Capacity Contribution method in the Q4, 2008 18-Month Outlook (method takes lesser of median of actual wind farm history or simulated 10 year wind history)
- An additional scenario to account for uncertainty associated with wind under extreme weather conditions will not be implemented (IESO will evaluate extreme events as they occur and determine the need for any future adjustment based on these experiences)
