

# *CURRENT Smart Grid™* Overview

September 8, 2008

- **Smart Grid Here and Now**
  - ***CURRENT Smart Grid™* Solutions**
  - **Summary**

# CURRENT Overview

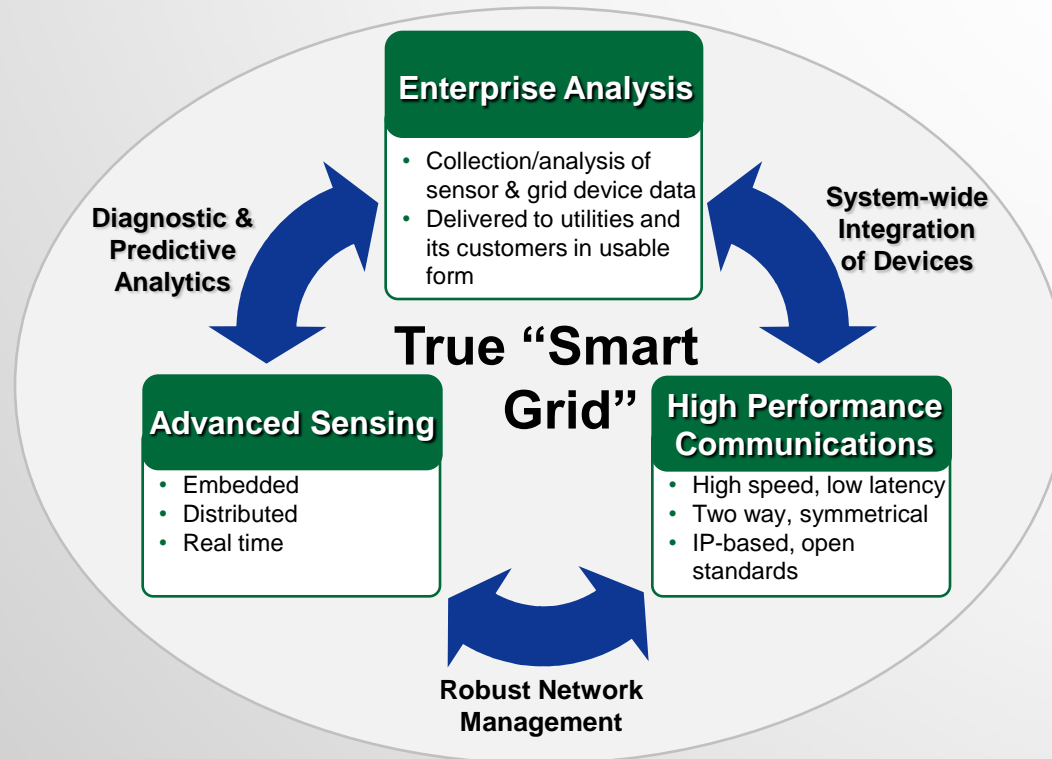

- The leader in Smart Grid with Integrated communications, sensors and management and analytic software solution
- Largest U.S. Smart Grid services deployment in progress with **Oncor** (formerly TXU Electric Delivery)
- Selected as Global supplier for **AES Corporation** with initial deployment in São Paulo, Brazil where AES Eletropaulo services over 5 million customers
- Deploying Smart Grid City with **Xcel Energy**
- Working with **Iberdrola and EDF** in an EU funded program to develop European Smart Grid with a focus on wide-scale deployment of distributed generation, renewables and demand side management
- Winner of 2006 Red Herring's Top 100 Private Companies and 2006 Platts Global Energy Commercial Technology of the Year award
- Offices in Washington, DC, Rochester, NY, San Diego, CA & Zurich, Switzerland and offices in local markets where deploying – approximately 300 employees
- Investors include:

# What is a Smart Grid?

“ . . . a power system that can incorporate millions of sensors all connected through an advanced communication and data acquisition system. This system will provide real-time analysis by a distributed computing system that will enable predictive rather than reactive responses to blink-of-the-eye disruptions.” (EPRI, emphasis added)

# CURRENT Smart Grid

*Emerging Issues require an Enterprise Solution Beyond AMI*

Over last several years, utility executives and regulators have become increasingly concerned about multiple issues that can only be addressed through an enterprise wide smart grid solution

<b>Cost and Uncertainty about New Generation and Transmission</b>	<b>Environmental Impact</b>
<b>Increasing Requirements for the use of Renewables and Distributed Generation</b>	<b>Aging Workforce</b>

<b>Smart Grid Enterprise Solution</b>	<b>Enhanced Demand Response</b>	<ul style="list-style-type: none"> <li>● Peak shaving through demand side management programs                             <ul style="list-style-type: none"> <li>▪ Enhance point load control and TOU programs with real-time verification and measurement</li> <li>▪ Enable smart home with intelligent appliances</li> </ul> </li> <li>● Inherent robust and ubiquitous HAN network</li> </ul>
	<b>Smart Grid System-wide</b>	<ul style="list-style-type: none"> <li>● Improving CAIDI, SAIDI, and SAIFI</li> <li>● Customer service and field maintenance labor reduction and improved productivity</li> <li>● Improved revenue assurance and receivables</li> <li>● Conservation Voltage/Var control</li> <li>● Vegetation management</li> <li>● Regulatory compliance</li> <li>● Reduced cost of insurance (outage related)</li> </ul>
	<b>Asset Management</b>	<ul style="list-style-type: none"> <li>● Optimized data collection and system planning</li> <li>● Transformer, capacitor bank and substation equipment automation and management</li> <li>● Asset life extension and failure avoidance</li> <li>● Reduced cost of URD cable replacement</li> </ul>
	<b>Advanced Future Grid Enhancements</b>	<ul style="list-style-type: none"> <li>● Plug-in Electric Hybrid Vehicles (PHEVs)                             <ul style="list-style-type: none"> <li>▪ Demand response, load shedding/shifting capability</li> </ul> </li> <li>● Management of distributed generation (including PHEV)</li> <li>● Differentiated service offerings</li> </ul>

# Smart Grid City – Boulder, CO

Collaborating to Build the Next Generation Utility

“The fundamental component for making the smart grid work will be a robust and dynamic communications network; providing the utility the ability for real-time, two-way communications throughout the grid and enabling interaction with each component from fuel source to end use” (Xcel Smart Grid White Paper)

## The Smart Grid City

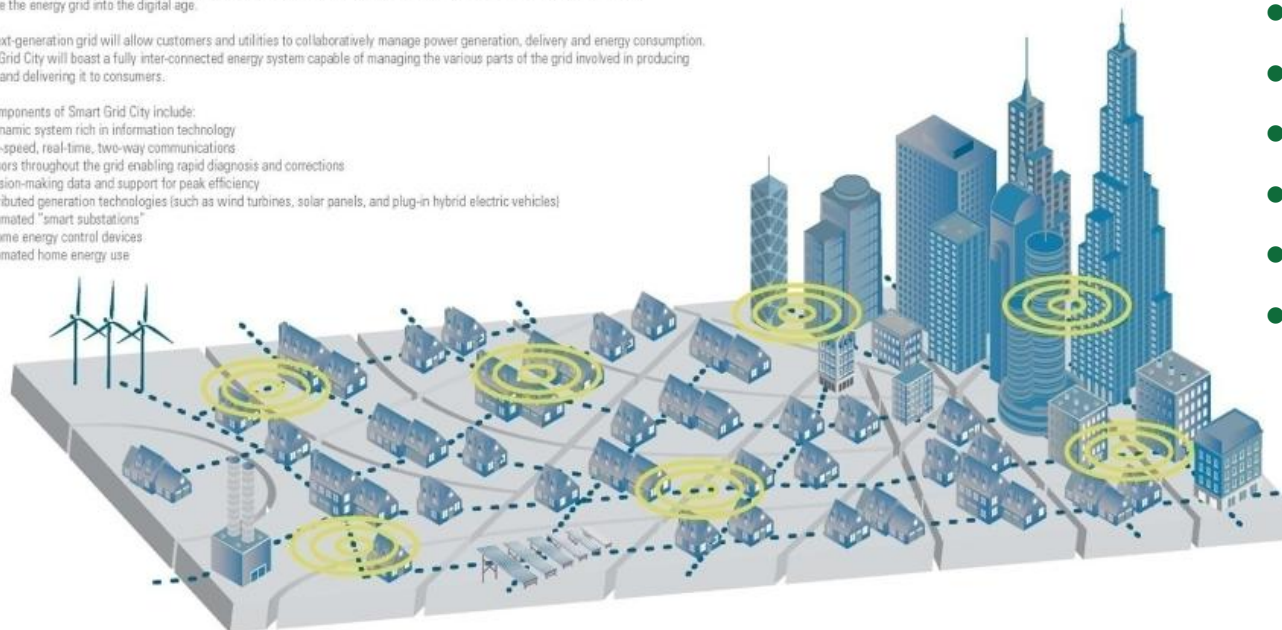

Xcel Energy's Smart Grid Consortium is working towards a future when our energy grid can predict its problems and strengths while optimizing available resources.

The Consortium has announced plans to build Smart Grid City, a community that combines traditional and emerging technology to move the energy grid into the digital age.

This next-generation grid will allow customers and utilities to collaboratively manage power generation, delivery and energy consumption. Smart Grid City will boast a fully inter-connected energy system capable of managing the various parts of the grid involved in producing power and delivering it to consumers.

Key components of Smart Grid City include:

- A dynamic system rich in information technology
- High-speed, real-time, two-way communications
- Sensors throughout the grid enabling rapid diagnosis and corrections
- Decision-making data and support for peak efficiency
- Distributed generation technologies (such as wind turbines, solar panels, and plug-in hybrid electric vehicles)
- Automated “smart substations”
- In-home energy control devices
- Automated home energy use

## Smart Grid Consortium

- Xcel
- CURRENT Group
- SEL (Schweitzer)
- Accenture
- Ventyx
- GridPoint

# Xcel's vision of Smart Grid isn't:

---

- Only about the electric meter
- Red Light, Green Light
- Layers of stovepiped applications
- Only about energy management
- Only 1 choice for customers
- Picking a winner in advance

# Advanced Sensing

*Intelligent Power Quality Monitors throughout Grid*

Sensors use built-in intelligence to detect issues and provide complete analysis including wave forms

Voltage Sensing	<ul style="list-style-type: none"><li>● Monitors both legs of Secondary (LV) voltage</li><li>● 16 samples/cycle, 1% accuracy, 10k samples/sec</li><li>● Exception Reporting</li><li>● Configurable thresholds for alarming</li><li>● Intelligent Triggers for capturing and reporting Waveforms</li></ul>
Current Sensing	<ul style="list-style-type: none"><li>● Monitors Primary (MV) current</li><li>● Option to measure Secondary (LV) current</li><li>● 16 samples/cycle, 2% accuracy, 10k samples/sec</li><li>● Configurable thresholds for alarming</li><li>● Five Minute Average Reporting</li><li>● Intelligent Triggers for capturing and reporting wave-forms</li><li>● Embedded Fault Detection based on protective device curves</li></ul>

## Ubiquitous Communications

- High through-put, low latency open architecture communications system

- High speed – low latency
  - System Protection response times
  - Capacity to handle Large Amounts during system events
- Single communications system
  - Serves all utility communications needs, substation through every outlet in the premise
  - IP-based
- Smart Grid requires high speed, low latency
  - Aggregated current and future applications
  - Data comes in waves
  - Upgradeability path is CRITICAL

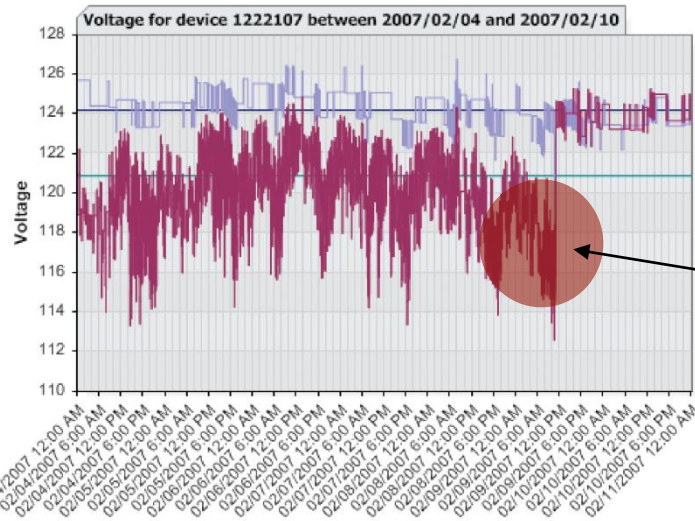

# Actionable Intelligence Case Study

## Distribution Asset Monitoring

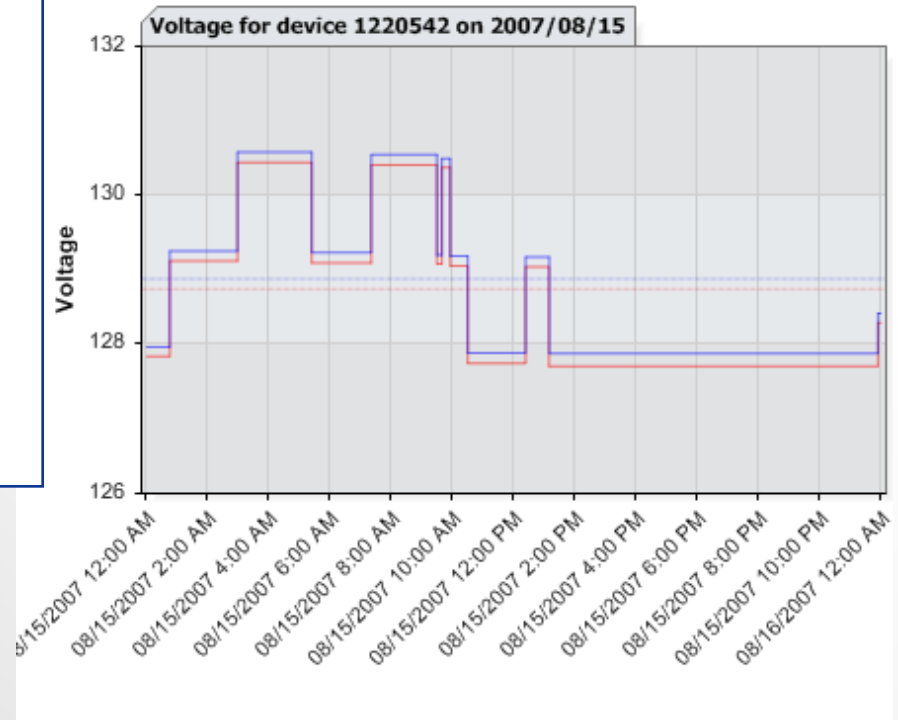

### TRANSIENT SECONDARY FAULT FINDINGS....

- This is a 37.5 KVA, 120/240v transformer with 2/0 copper conductor connecting it to the secondary bus
- One conductor had rubbed against the cooling fin of the transformer and burned the conductor for ~10" back to the secondary bushing of the transformer
- Utility was able to repair before a customer call
- **Result – Outage and potential safety issue avoided**

### Monitor Voltage at each Transformer

- System detects high voltage exceeding thresholds
- Automated notification is sent
- Situation can be analyzed using real time status at various transformers from substation to end of feeder
- Substation Bus voltage can be reduced, optimizing system

### Conclusion:

**System is  
better  
optimized**

CURRENT Smart Grid was designed to maximize flexibility and interoperability for the life of the system

<b>Meter and Device Agnostic</b>	<ul style="list-style-type: none"><li>● CURRENT Smart Grid is designed independent of specific end-point devices</li><li>● CURRENT has and can partner with any meter or in-home customer control device manufacturer preferred, present day or in the future</li><li>● Utility maintains meter/control device vendor choices for the life of the system</li></ul>
<b>Open Standards Network</b>	<ul style="list-style-type: none"><li>● IP based network can interconnect with multiple devices and software applications</li><li>● Connects to any Ethernet enabled device any where on the grid</li><li>● Leverages BPL, fiber optics and other communications technologies as appropriate</li><li>● Leverages advances in Internet security/technology</li></ul>
<b>Utility Compatible</b>	<ul style="list-style-type: none"><li>● Software systems that fit into Utility's IT infrastructure</li><li>● Oracle and SQL databases</li><li>● Open APIs to interface with existing utility software systems</li><li>● Built-in enterprise level security</li></ul>

- Smart Grid Here and Now
- *CURRENT Smart Grid™* Solutions
- Summary

## **Integrated Smart Grid Solution**

- Exceeds the guideline requirements of present AMI mandates
- High speed, low latency two-way communications to meet present/future needs
- Embedded advanced sensors provide Actionable intelligence, and software analytics
- Open IP-based standards to reduce costs, simplify integration and ensure future upgradeability
- Real-time, two-way, verifiable and targeted demand response capabilities

## **Addresses Market Requirements**

- Demand-Supply imbalance
  - Greatly reduces operational inefficiencies and line loss
  - Enables peak saving through robust demand response capabilities
  - Enables the monitoring, coordination and control necessary to manage distributed, renewable generation
- Aging Infrastructure and grid reliability
  - Allows the real-time monitoring and proactive maintenance of distribution infrastructure
  - Enables faster and targeted outage detection and restoration
- Environmental impact
  - Functions as a clean, renewable energy source, reducing the need for additional CO<sub>2</sub> emitting generation sources

## **Accelerating Adoption**

- Advanced discussions with Utilities worldwide
- Increasing Political and Regulatory Support as means to solve Demand/Supply issues as well as to reduce Greenhouse Gas
- Future proofed enterprise wide network reduces risk of stranding point AMI solutions
- Improved reliability, efficiency, customer service and asset management
