

OPG action item

At the last FASC stakeholder meeting, I agreed to prepare the following request for information to be included as part of the IMO resource adequacy assessments:

OPG's understanding is that the IMO currently assumes only Ontario resources and load to establish the adequacy of supply in the Ontario market and it is OPG's view that this should continue. However, OPG requests that the IMO provide more realistic assessments of availability of external MWs to support Ontario in its reports. This will provide better insight to Market Participants on the going forward risks to outage plans. This may be a seasonally adjusted value which would be used in the outage approval process.
