Subject: Stakeholder Input Capacity Auction Enhancements

Hello all,

The Market Manual amendments that will formalize the Stream 1 Capacity Auction Enhancements are now posted to the [Pending Changes](#) web page as part of Baseline 50.0. The stakeholder input window ends on August 8, 2023.

Included in these amendments is a slight modification to the availability de-rate methodology for dispatchable loads that was added following stakeholder review of Market Manual 12 in the [Capacity Auction Enhancements engagement](#) earlier this year. The descriptions of “hourly *bids* quantity” and “maximum seasonal energy *bid* quantity” now include language to limit those values to an amount no greater than the capacity obligation that the resource held during the relevant historical obligation periods. The IESO believes that historical dispatchable load bid amounts in excess of capacity obligations should not be considered when evaluating a resource’s average expected availability, since this extra capacity was not considered available for Capacity Auction purposes.

Please contact pending.changes@ieso.ca if you have any questions about this process.

Regards,
IESO Engagement
