

IESO Charge Types and Equations

LST

~~Issue 82.1~~
Issue 82.2
January 29,
2024~~August 4, 2023~~

This document is provided for stakeholder engagement purposes. Please note that additional changes to this document may be incorporated as part of future engagement in MRP or other *IESO* activities prior to this document taking effect.

This document enumerates the various *charge types* and equations used in the *IESO settlements process* for *IESO-administered markets*.

Document Change History

Issue	Reason for Issue	Date
For change history prior to Issue 22.0, refer to Issue 29.0 of the CT&E. For change history for Issue 22.0 to Issue 29.0, refer to Issue 38.0 of the CT&E. For change history for Issue 30.0 to Issue 49.0, refer to Issue 59.0 of the CT&E		
This version of IESO Charge Types and Equations contains new content under the Market Renewal Program (MRP). For history prior to MRP, refer to version 82.0.

Conventions

The standard conventions for *market manuals* are as follows:

- The word 'shall' denotes a mandatory requirement;
- References to *market rule* sections and sub-sections may be abbreviated in accordance with the following representative format: '**MR Ch.1 ss.1.1-1.2**' (i.e. *market rules*, Ch.1, sections 1.1 to 1.2);
- References to *market manual* sections and sub-sections may be abbreviated in accordance with the following representative format: '**MM 1.5 ss.1.1-1.2**' (i.e. *market manual* 1.5, sections 1.1 to 1.2);
- Internal references to sections and sub-sections within this manual take the representative format: 'sections 1.1 – 1.2';
- Terms and acronyms used in this *market manual* in its appended documents that are italicized have the meanings ascribed thereto in **MR Ch.11**;
- All user interface labels and options that appear on the *IESO* gateway and tools are formatted with the bold font style; and
- Data fields are identified in all capitals.

Unless otherwise noted, usage of variable subscripts and superscripts within this document shall mirror the same usage within **MR Ch.9**. One notable exception is the usage of notation to sum across *settlement amounts* for *charge type* "c". This is noted within the applicable equations.

– End of Section –

1. Introduction

1.1. Purpose

The purpose of this document is to provide the reader with the formulas and variable definitions behind each different *charge type* implemented in the *IESO settlements process*, including tax treatment. Furthermore, this document relates each *charge type* to the high-level description of the *settlement amount* within the *IESO market rules* and, where applicable, notes any aspects of the implementation of the *charge type* itself.

This document must be read in conjunction with the applicable *market rules*. Where there is a conflict between this document and the *market rules*, the *market rules* shall prevail.

1.2. Scope

This document provides the formulas and the Harmonized Sales Tax (HST) tax treatment for each *charge type* implemented in the *IESO settlements system*. This document does not, however, provide the format of the information provided to *market participants* on *settlement statements* with respect to each *charge type*. For more information on these topics, refer to the [Format Specifications for Settlement Statement Files and Data Files](#) document located on the [Technical Interfaces](#) webpage under 'Commercial Reconciliation'.

This document is structured as follows:

[Section 2](#): Active *IESO Charge Types and Equations*

[Section 2.1](#): This section contains a description of the variables that are specific to *charge types* associated with *applicable law* within [section 2.2](#). Variables not defined in this section are as defined in **MR Ch.9 Appendix 9.2** or within the relevant *market rule* that is specific to the *charge type*.

[Section 2.2](#): This section contains all active *IESO charge types* and equations that are either:

- part of the *IESO-administered market*, or
- associated with non-market *settlement* programs as mandated by *applicable law*, administered by the *IESO*.

[Section 2.3](#): This section contains a description of rounding conventions for *charge type* calculations within [section 2.2](#).

[Section 2.4](#): This section contains a description of *physical bilateral contract quantities*, their usage by the *settlements system*, and their use by *market participants* as a vehicle for transferring components of *hourly uplifts*.

[Section 3](#): Inactive *IESO* Charge Types and Equations

Similar to subsections within [section 2](#), however the provisions of [section 3](#) are applicable to those *IESO charge types* and equations that are no longer active and have been retained in the event that a re-calculation of the *charge type* is required. The *charge types* included in this section are:

- expired (i.e. program has ended);
- replaced with another *charge type*;
- replaced with an updated calculation (i.e. due to new variable or exclusion/addition of *charge type* to be uplifted); or
- retired under the Market Renewal Program (MRP), effective from the MRP commencement date.

This section also includes [section 3.6](#) which describes how day-ahead import, export and linked wheel transactions are subject to an “Offer Price Test” in order to determine if they are exempt from the Day-Ahead Failure Charges (*charge types* 1135, 1136 and 1134) which has been retired under MRP.

1.3. Tax Treatment

The *IESO* is a registrant for purposes of the Excise Tax Act and all or substantially all of the supplies made by the *IESO* are taxable for GST/HST purposes.

The *IESO* administers the *IESO-administered markets* in compliance with the current provisions of the Excise Tax Act and the published rulings, administrative policies, and assessing practices of the Canada Revenue Agency. The *IESO* conducts regular tax reviews with its advisors to ensure that transactions within the *IESO-administered markets* comply with the foregoing.

Market participants should consult their own legal and tax advisors for advice with respect to the tax consequences of transactions in the *IESO-administered markets*.

1.4. Contact Information

Changes to this document are managed via the [IESO Change Management process](#). Stakeholders are encouraged to participate in the evolution of this document via this process.

As part of the authorization and registration process¹, *market participants* are required to identify a Settlements Contact. If a *market participant* has not identified a specific contact, the *IESO* will seek to contact the Primary Contact unless alternative arrangements have been established between the *IESO* and the *market participant*.

To contact the *IESO*, you can email *IESO* Customer Relations at customer.relations@ieso.ca or use telephone or mail. Telephone numbers and the mailing address can be found on the [IESO website](#). *IESO* Customer Relations staff will respond as soon as possible.

¹ Refer to [MM 1.5: Market Registration Procedures](#) for adding and updating contact roles with the *IESO*.

If you have a specific inquiry regarding a *settlement amount* on any of your *settlement statements*, refer to **MM 5.10: Settlement Disagreements** for further details.

– End of Section –

2. Active IESO Charge Types and Equations

The provisions of this section include all active *charge types* that are:

- part of the *IESO-administered market*; and
- associated with non-market *settlement* programs as mandated by *applicable law*, administered by the *IESO*.

2.1. Variable Descriptions

The following Table 2-1 contains descriptions of variables that are specific to *charge types* associated with *applicable law* within [section 2.2](#).

Variables not defined in this table are as defined in **MR Ch.9 Appendix 9.2** or within the relevant *market rule* that is specific to the *charge type*.

Table 2-1: Variable Descriptions for Active Charge Types and Equations

Key to the Table Below				
Variable used within Section 2	Data Description	Description	Maximum Rounding Convention in Settlement Statements or Data Files ²	Relevant Reference and Other Information
EEQ	Excluded Energy Quantity	The total volume of <i>energy</i> (MWh) supplied to Fort Frances Power Corporation Distribution Inc. by Abitibi-Consolidated Inc. during the month.	3	Refer to regulations.
EGEI _k	Embedded Generator Energy Injection	The total volume of <i>energy</i> (MWh) supplied by <i>embedded generators</i> during the month to <i>distributors</i> who are <i>market participants</i> and to all embedded distributors to whom the <i>market participant 'k'</i> is the host <i>distributor</i> , adjusted for	3	Refer to regulations.

² This column discloses the accuracy of a *settlement* variable appearing on a *settlement statement*. NOTE: This should not be confused with the number of decimal places allowable in some columns on the *settlement statements* and data files as set out in [Format Specifications for Settlement Statements and Data Files](#).

Key to the Table Below				
Variable used within Section 2	Data Description	Description	Maximum Rounding Convention in Settlement Statements or Data Files ²	Relevant Reference and Other Information
		losses as required by the <i>OEB</i> , Retail Settlement Code.		
ETS	Export Transmission Service Tariff Rate	Export Transmission Service Tariff Rate in units of \$/MWh.	2	Subject to the OEB "Ontario Transmission Rate Order".
GA_AQEW _{g,k,h,M^m,t}	Allocated Quantity of Energy Withdrawn for elements of the Global Adjustment distribution	Allocated quantity in MWh of <i>energy</i> withdrawn by <i>market participant</i> or Distributor 'k' at <i>RWM</i> 'm' in <i>metering interval</i> 't' of <i>settlement hour</i> 'h' in month 'M' for element "g". Where 'g' is 1 for Class A Market Participant or Consumer load, and 2 for <i>energy</i> withdrawn by Generator 'k' in the course of providing Ancillary Services.		Refer to regulations.
GAR _B	Global Adjustment Rate for Class B	GA Class B Rate.		Refer to regulations.
GRP	Generator Regulated Price	A regulated price (\$/MWh) with respect to output of OPG's regulated generating stations, set by the <i>OEB</i> .	2	Subject to regulation by the <i>Ontario Energy Board</i> .
LCD _{k,h^m}	Line Connection Demand (KW)	Billing Demand for Line Connection Transmission Service (KW) for <i>transmission customer</i> 'k' at transmission delivery point 'm' during <i>settlement hour</i> 'h' in which LCD _{k,h^m} denotes the non-coincident peak demand for the month.	3	Subject to the OEB "Ontario Transmission Rate Order".
NSD _{k,h^m}	Network Service Demand (KW)	The Billing Demand for Network Transmission Service (KW) is defined as the higher of: transmission customer coincident peak demand (KW) in the hour of the month when the total hourly demand of all PTS customers is highest for the month; and 85% of the customer peak demand in any hour during the peak period 7 AM to 7 PM (local time) on <i>business days</i> defined by the <i>IESO</i> .	3	Subject to the OEB "Ontario Transmission Rate Order".

Key to the Table Below				
Variable used within Section 2	Data Description	Description	Maximum Rounding Convention in Settlement Statements or Data Files ²	Relevant Reference and Other Information
		<p>For the purposes of determining business days for calculating transmission charges, the IESO uses the holidays identified by the Ontario Energy Board.</p> <p>The peak period hours will be between 0700 and 1900 hours Eastern Standard Time during winter (i.e. during standard time) and 0600 to 1800 hours during summer (i.e. during daylight savings time), in conformance with the meter time standard used by the <i>IESO</i> settlement systems.</p>		
$PDF_{k,m,d}$	Peak Demand Factor	The Peak Demand Factor for Class A Market Participant or Distributor 'k' for month 'm' with effectiveness ratio 'd'.		Subject to regulation by the <i>Ontario Energy Board</i> .
$PGSh_{h,M}$	Allocated Quantity of Energy Withdrawn by OPG at Beck Pump Generating Station	Allocated quantity in MWh of <i>energy</i> withdrawn by OPG at Beck Pump Generating Station in <i>metering interval</i> 't' of <i>settlement hour</i> 'h' for month 'M'.		
PTS-L	Provincial Transmission Service Line Connection Service Rate (\$/KW)	Line Connection Transmission Tariff Service Rate in units of dollars per kilowatt.	2	Subject to the OEB "Ontario Transmission Rate Order".
PTS-N	Provincial Transmission Service Network Service Rate (\$/KW)	Network Transmission Tariff Service Rate in units of dollars per kilowatt.	2	Subject to the OEB "Ontario Transmission Rate Order".
PTS-T	Provincial Transmission Service Transformation Connection Service Rate (\$/KW)	Transformation Connection Service Transmission Tariff Rate in units of dollars per kilowatt.	2	Subject to the OEB "Ontario Transmission Rate Order".
RPP_i	Regulated Price Plan	A fixed <i>energy</i> rate for all <i>metering intervals</i> based on consumption level I.		Subject to regulation by the <i>Ontario Energy Board</i> .

Key to the Table Below				
Variable used within Section 2	Data Description	Description	Maximum Rounding Convention in Settlement Statements or Data Files ²	Relevant Reference and Other Information
$TCD_{k,h}^m$	Transformation Connection Demand (KW)	Billing Demand for Transformation Connection Transmission Service (KW) for <i>transmission customer</i> 'k' at transmission delivery point m during <i>settlement hour</i> 'h' in which $TCD_{k,h}^m$ denotes the non-coincident peak demand for the month.	3	Subject to the OEB "Ontario Transmission Rate Order".
$TD_{k,h,c}$	Total Market Settlement Amount	Total <i>settlement amount</i> (dollars) for the market used in <i>hourly uplift</i> and calculations for various other non-hourly <i>settlement amounts</i> for <i>market participant</i> 'k' or <i>transmission customer</i> 'k' during <i>settlement hour</i> 'h' with respect to <i>charge type</i> 'c'.	N/A	This is purely a notational term is used within the documentation to describe the aggregation of various <i>settlement amounts</i> . A summation across <i>charge type</i> 'c' denotes an aggregation of all <i>settlement amounts</i> for that <i>charge type</i> for the time period concerned. e.g.: \sum_c^T indicates a summation of all <i>settlement amounts</i> for <i>charge type</i> 'c' during all <i>metering intervals</i> 'T'.
TLQ	Threshold Load Quantity	A threshold (kWh) with respect to monthly consumption of regulated customers, set by the OEB.		Subject to regulation by the <i>Ontario Energy Board</i> .
TP_c	Tariff price	A stipulated rate (\$/MWh, \$/KW) used in the calculation of a specific <i>charge type</i> 'c'.	N/A	This is purely a notational term used within the documentation to describe the unique per MW or per MWh rate applied to specific quantities in order to calculate various <i>settlement amounts</i> .
U_k	Energy Storage Facility Injection	The total volume of <i>energy</i> (MWh) conveyed back into the <i>IESO-controlled grid</i> during the month by energy storage facilities associated with Class B <i>market participant</i> 'k' and the total volume of <i>energy</i> (MWh) conveyed back into the <i>distribution system</i> during the month by energy storage facilities that are Class B consumers of <i>distributor</i> 'k'.		Refer to regulations.

2.2. Charge Types and Equations

The following tables contain all active *IESO charge types* and equations that are:

- part of the *IESO-administered market*; and
- associated with non-market *settlement* programs as mandated by *applicable law*, administered by the *IESO*.

Refer to [section 3.2](#) for inactive *IESO charge types* and equations.

The following Table 2-2 provides a description of each of the column references for *charge types* and equations.

Table 2-2: Description of Column References for Charge Types and Equations

Key to the Table Below	
Charge Type Number	The designation number for each <i>charge type</i> enumerated below – which corresponds to the <i>charge type</i> numbers used on <i>settlement statements</i> and <i>invoices</i> .
Charge Type Name	The name of the <i>charge type</i> , including, where applicable, the abbreviated name used to describe the <i>settlement amount</i> within the <i>IESO market rules</i> and <i>market manuals</i> .
Market Rules Reference	The relevant reference to the variable in question within the <i>IESO market rules</i> .
Equation	The equation used by the <i>IESO settlements process</i> to calculate the <i>settlement amount</i> for the <i>charge type</i> .
Settlement Resolution	<p>The level of granularity by which the <i>IESO settlements process</i> calculates the <i>settlement amount</i> for the <i>charge type</i>, and provides the supporting data in the <i>settlement</i> data file.</p> <p>Where:</p> <ul style="list-style-type: none"> • Interval calculations are performed on the basis of each relevant, 5-minute <i>metering interval</i>; • Hourly calculations are performed on the basis of each <i>settlement hour</i>; • Daily calculations are performed on the basis of each calendar day; • Monthly calculations are performed on the basis of a calendar month (equivalent to an <i>energy market billing period</i>); • Quarterly calculations are performed on the basis of 3 month intervals; • Yearly calculations are performed on the basis of a calendar year.

Key to the Table Below	
Cashflow	<p>This column indicates whether or not the <i>settlement amount</i> for the <i>charge type</i> is:</p> <p>“Due <i>IESO</i>” – which means, owed to the <i>IESO</i> by the <i>market participant</i>; *** or “Due MP” – which means, owed to the <i>market participant</i> by the <i>IESO</i>; *** or “Either Way” – which indicates that the <i>settlement amount</i> in question could be either owed to the <i>IESO</i> by the <i>market participant</i> or owed to the <i>market participant</i> by the <i>IESO</i> in any given time period (according to the applicable “Settlement Resolution”).</p> <p>***NOTE in cases where a Cashflow is designated as “Due <i>IESO</i>” or “Due MP” this should be read in the context of its intended use in the normal course of <i>settlements</i>. However, such cashflows can always be REVERSED in situations where an adjustment is applied to a <i>market participant</i>, or the application of a per-unit charge in order to offset an adjustment to another <i>market participant</i>.</p>
HST Tax Treatment within Ontario	<p>This column indicates the percentage levy as per the Harmonized Sales Tax (HST). Zone used for Tax Basis is (ONZN) for Ontario.</p>
HST Tax Treatment for U.S., Manitoba and Quebec Generation	<p>This column indicates the percentage levy as per the Harmonized Sales Tax (HST). Zones used for Tax Basis are (NYSI) for US Generation, (MBSI) for Manitoba Generation and (PQSI) for Quebec Generation.</p>
HST Tax Treatment for US Load	<p>This column indicates the percentage levy as per the Harmonized Sales Tax (HST). Zone used for Tax Basis is (NYSI) for US Load.</p>
HST Tax Treatment for Manitoba and Quebec Load	<p>This column indicates the percentage levy as per the Harmonized Sales Tax (HST). Zones used for Tax Basis are (MBSI) for Manitoba Load and (PQSI) for Quebec Load.</p>
Comments	<p>This column notes any <i>charge types</i> that are governed by various documentation other than the <i>IESO market rules</i> such as <i>applicable law</i>. References to other <i>market manuals</i> may be included here, where applicable.</p>

2.2.1. Financial Market Charge Types and Equations

The following Table 2-3 describes the *charge types* and equations in the financial market.

Table 2-3: Financial Market Charge Types and Equations

Charge Type Number	Charge Type Name	Market Rules Reference	Equation	Settlement Resolution	Cashflow	HST Tax Treatment within Ontario (%)	HST Tax Treatment for U.S., Manitoba, and Quebec Generation (%)	HST Tax Treatment for U.S. Load (%)	HST Tax Treatment for Manitoba and Quebec Load (%)	Comments
52	Transmission Rights Auction Settlement Debit	MR Ch.8 s.3.17	$QTR_{k,h}^{ij} \times TRMP$ <p>Where 'TRMP' is the price of each <i>transmission right</i> in a single round of a <i>TR auction</i> and expressed in up to 2 decimal places.</p>	Daily	Due IESO	Exempt	Exempt	Exempt	Exempt	

2.2.2. Physical Market Charge Types and Equations

The following Table 2-4 describes the *charge types* and equations in the *physical market*.

Table 2-4: Physical Market Charge Types and Equations

Charge Type Number	Charge Type Name	Market Rules Reference	Equation	Settlement Resolution	Cashflow	HST Tax Treatment within Ontario (%)	HST Tax Treatment for U.S., Manitoba, and Quebec Generation (%)	HST Tax Treatment for U.S. Load (%)	HST Tax Treatment for Manitoba and Quebec Load (%)	Comments

2.3. Rounding Conventions – by Charge Type

2.3.1. General Notes

- All *settlement amounts* reported by the *IESO settlements* system are expressed in dollars and are rounded to the nearest cent (e.g. to two decimal places) on *settlement statements*, although some *settlement* calculations may only yield 1 significant digit to the right of the decimal place. In these instances, the financial amount is NOT further rounded to the nearest ten cents.
- **Table 2-5** provides a description of each of the column references for rounding conventions by *charge type*.
- **Table 2-6** lists all the rounding conventions by *charge type*. This table:
 - references significant digits to the right of the decimal place. This should NOT be confused with the number of decimal places allowable in some columns on the *settlement statements* and data files as set out in [Format Specifications for Settlement Statement Files and Data Files](#) document. This document is located on the [Technical Interfaces](#) webpage under 'Commercial Reconciliation';
 - does not include the final rounding step to the nearest cent, as this is done for ALL *settlement amounts*. Rather, it describes any intermediate calculations (particularly, those involving division) that involve rounding prior to the final calculation of the *settlement amount*.

Table 2-5: Description of Column References for Rounding Conventions – by Individual Charge Type

Column Name	Description
Charge Type Number	This table contains an entry for each active <i>charge type</i> listed in section 2.2 .
Charge Type Name	The name of each of the <i>charge types</i> .
INPUT VARIABLES Least number of significant digits to the right of the decimal	In terms of assessing the accuracy of the final <i>settlement amount</i> , this column is derived from the <i>settlement</i> variable received by the <i>settlement</i> system with the LEAST number of significant digits to the right of the decimal place.
INPUT VARIABLES Maximum number of significant digits to the right of the decimal	In terms of assessing the accuracy of the final <i>settlement amount</i> , this column is derived from the <i>settlement</i> variable received by the <i>settlement</i> system with the MAXIMUM number of significant digits to the right of the decimal place.

Column Name	Description
Intermediate Rounding done by Settlements?	This column indicates whether or not any INTERMEDIATE rounding is done by the <i>IESO settlement process</i> . This does <u>NOT</u> include the final rounding of settlement amounts to 2 decimal places as the last step in the calculation of ALL charge types.
INTERMEDIATE CALCULATION 1 (where intermediate rounding occurs)	This column ONLY describes an intermediate calculation of the <i>settlement amount</i> in which rounding occurs PRIOR to the final rounding of the <i>settlement amount</i> to the nearest cent.
DISPOSITION OF INTERMEDIATE CALCULATION 1	This column describes the disposition of the rounded value resulting from Intermediate Calculation 1.
INTERMEDIATE CALCULATION 2 (where intermediate rounding occurs)	This column ONLY describes an intermediate calculation of the <i>settlement amount</i> in which rounding occurs PRIOR to the final rounding of the <i>settlement amount</i> to the nearest cent.
DISPOSITION OF INTERMEDIATE CALCULATION 2	This column describes the disposition of the rounded value resulting from Intermediate Calculation 2.

Table 2-6: Rounding Conventions – by Individual Charge Type

Charge Type Number	Charge Type Name	INPUT VARIABLES Least number of significant digits to the right of the decimal	INPUT VARIABLES Maximum number of significant digits to the right of the decimal	Intermediate Rounding done by Settlements?	INTERMEDIATE CALCULATION 1 (where intermediate rounding occurs)	DISPOSITION OF INTERMEDIATE CALCULATION 1	INTERMEDIATE CALCULATION 2 (where intermediate rounding occurs)	DISPOSITION OF INTERMEDIATE CALCULATION 2
52	Transmission Rights Auction Settlement Debit	0	2	No				
102	TR Clearing Account Credit	1	3	No				
104	Transmission Rights Settlement Credit	0	2	No				
114	Outage Cancellation/ Deferral Settlement Credit	2	2	No				
115	Unrecoverable Testing Costs Credit	2	2	No				
116	Tieline Maintenance Reliability Credit	2	2	No				
118	Emergency Energy Rebate	1	3	No				
119	Station Service Reimbursement Credit	2	3	No				
121	Northern Energy Advantage Program Settlement Amount	1	3	No

2.4. Settlement of Physical Bilateral Contracts

2.4.1. Market Price of Energy Applied to Location of Physical Bilateral Contract

(MR Ch.8 s. 2.1)

The *settlement process* will apply the applicable *market price for energy* according to the location of the *physical bilateral contract* in accordance with **MR Ch.8 s.2.1.3.2** and is summarized in the following tables for each timeframe.

Table 2-7: Day-Ahead Market: Market Price of Energy Applied to Location of Physical Bilateral Contract

Location of Physical Bilateral Contract	Settlement of Selling Market Participant <u>Debit</u> the <i>physical bilateral contract quantity of energy sold at the...</i>	Settlement of Buying Market Participant <u>Credit</u> the <i>physical bilateral contract quantity of energy bought at the...</i>	Charge Type
Non-dispatchable <i>delivery point – generation resource</i>	N/A	N/A	N/A
Non-dispatchable <i>delivery point – load resource</i>	N/A	N/A	N/A
<i>Price responsive loads</i> <i>Self-scheduling electricity storage resources</i>	DAM_LMP _h ^m	DAM_LMP _h ^m	<i>Charge Type</i> 1104
Dispatchable <i>delivery point</i> <ul style="list-style-type: none"> • <i>generation resource</i> • <i>electricity storage resource (injecting or withdrawing)</i> • <i>dispatchable load</i> 	DAM_LMP _h ^m	DAM_LMP _h ^m	<i>Charge type</i> 1100 1102
<i>Intertie metering point</i>	DAM_LMP _h ⁱ	DAM_LMP _h ⁱ	<i>Charge type</i>

Location of Physical Bilateral Contract	Settlement of Selling Market Participant Debit the <i>physical bilateral contract quantity of energy sold at the...</i>	Settlement of Buying Market Participant Credit the <i>physical bilateral contract quantity of energy bought at the...</i>	Charge Type
			1110 1112

Table 2-8: Real-Time Market: Market Price of Energy Applied to Location of Physical Bilateral Contract

Location of Physical Bilateral Contract	Settlement of Selling Market Participant Debit the <i>physical bilateral contract quantity of energy sold at the...</i>	Settlement of Buying Market Participant Credit the <i>physical bilateral contract quantity of energy bought at the...</i>	Charge Type
Non-dispatchable <i>delivery point – generation resource</i>	$RT_LMP_h^{m,t}$	$RT_LMP_h^{m,t}$	<i>Charge type</i> 1114
Non-dispatchable <i>delivery point – load resource</i>	$DAM_LMP_h^z$	$DAM_LMP_h^z$	<i>Charge type</i> 1115
<i>Price responsive loads</i> <i>Self-scheduling electricity storage resources</i>	$RT_LMP_h^{m,t}$	$RT_LMP_h^{m,t}$	<i>Charge type</i> 1105
Dispatchable <i>delivery point</i> <ul style="list-style-type: none"> • <i>generation resource</i> • <i>electricity storage resource (injecting or withdrawing)</i> 	$RT_LMP_h^{m,t}$	$RT_LMP_h^{m,t}$	<i>Charge type</i> 1101 1103

Location of Physical Bilateral Contract	Settlement of Selling Market Participant <u>Debit</u> the <i>physical bilateral contract quantity of energy sold at the...</i>	Settlement of Buying Market Participant <u>Credit</u> the <i>physical bilateral contract quantity of energy bought at the...</i>	Charge Type
<ul style="list-style-type: none"> <i>dispatchable load</i> 			
<i>Intertie metering point</i>	$RT_LMP_h^{i,t}$	$RT_LMP_h^{i,t}$	<i>Charge type</i> 1111 1113

These *settlement* debits and credits are included in the overall *settlement amounts* calculated for the *energy charge types* noted in the tables above under the two-*settlement* system, in accordance with **MR Ch.9 s.3.1-3.2**.

2.4.2. The Nature of the Bilateral Contract Quantity

(MR Ch.8 s.2.3)

Physical bilateral contract data, submitted by *selling market participants* to the IESO in the *day-ahead market* and/or *real-time market* must contain the information in accordance with MR Ch.8 s.2.2. *Selling market participants* shall submit *physical bilateral contract data* for the same *delivery point* or *intertie metering point* on the same *trading day* in one of the two following forms in accordance with **MR Ch.8 s.2.3**:

1. absolute quantities of *energy*, as described in **MR Ch.8 s.2.3.1.2**; and
2. derived quantity of *energy*, as described in **MR Ch.8 s.2.3.1.1**.

The derived quantity of *energy* option is only available for *real-time market physical bilateral contracts* and where one of the two parties to the *physical bilateral contract* is the *metered market participant* for the *registered wholesale meter* associated with the *delivery point*.

The following examples illustrate the submission of *physical bilateral contract data* using the derived quantity of *energy*, where:

- the *delivery point* chosen by the *selling market participant* must belong to either the *selling market participant* or the *buying market participant*;
- if the *delivery point* is designated as a sub-type 'I' (injection) *delivery point*, 100% of all injected *energy* for each *metering interval* in each applicable *settlement hour* shall be used regardless of any *physical allocation data*;
- if the *delivery point* is designated as a sub-type 'W' (withdrawal) *delivery point*, 100% of all withdrawn *energy* for each *metering interval* in each applicable *settlement hour* shall be used regardless of any *physical allocation data*; and
- quantities of *energy* in the *physical bilateral contract data* are total quantities of *energy* for each *settlement hour* and not quantities of *energy* for *metering intervals* within the *settlement hour*.

Table 2-9: Derived Quantities Example 1

Derived Quantities Example 1: <i>Delivery point belongs to the SELLING market participant and is a sub-type 'I' (injection) delivery point.</i>

Total Quantity for the hour	20											

2.4.3. Allocation of Hourly Uplift Components Between Buying and Selling Market Participants

The *settlement process* will collect *physical bilateral contract data* in accordance with **MR Ch.9 s.2.7**, and for each *physical bilateral contract data*, the *settlement process* will allocate *hourly uplift* components assigned to the *selling market participant* and the *buying market participant* in accordance with **MR Ch.8 s.2.1.3.4** and **MR Ch.9 s.3.10**.

Each *hourly uplift* component (not the individual *charge types* themselves) may be selected in any combination when the *physical bilateral contract data* is submitted by the *selling market participant*. Confirmation of this selection is included within the *settlement statement* support data files as record type 'B'. Detailed information is provided in the document [Format Specifications for Settlement Statement Files and Data Files](#) document located on the [Technical Interfaces](#) webpage under 'Commercial Reconciliation'.

The *hourly uplift* components that may be allocated are included in Table 2-13.

Table 2-13: Allocation of Hourly Uplift Components

Hourly Uplift Component Group	Associated Charge Types	Comments
Operating Reserve Settlement Credit (ORSC)	250 252 254	Separate <i>charge types</i> for recovery of HORSAs <i>settlement amounts</i> paid to <i>market participants</i> for each class of <i>operating reserve</i> .
Intertie Failure Charge Rebate (IFCR)	186	Aggregation of the following <i>charge types</i> : <ul style="list-style-type: none"> <i>charge type</i> 135 Real-time Import Failure Charge <i>charge type</i> 136 Real-time Export Failure Charge
Intertie Offer Guarantee Settlement Credit (IOGSC)	1977	Recovery of <i>charge type</i> 1927 Real-Time Intertie Offer <i>settlement amount</i> paid to <i>market participants</i> .
Operating Reserve Shortfall Settlement Debit (ORSSD)	201 203 205	Separate <i>charge types</i> for distribution of ORSSD <i>settlement amounts</i> received from <i>market participants</i> for shortfalls in the provision of each class of <i>operating reserve</i> .
Generator Failure Charge Rebate (GFCR)	1970	Distribution of <i>charge type</i> 1920 Generator Failure Charge – Market Price Component received from <i>market participants</i> .

Hourly Uplift Component Group	Associated Charge Types	Comments
Day-Ahead Market Settlement Credit (DAMSC)	1865	Aggregation of the following <i>charge types</i> : <ul style="list-style-type: none"> <i>charge type</i> 1815 Day-Ahead Market Balancing Credit – Energy <i>charge type</i> 1816 Day-Ahead Market Balancing Credit – Operating Reserve
Real-Time Market Settlement Credit (RTMSC)	1950	Aggregation of the following <i>charge types</i> : <ul style="list-style-type: none"> <i>charge types</i> 1900 to 1907 for Real-Time Make-Whole Payment <i>settlement amounts</i>

2.4.3.1 Reallocate Quantity

The effect of selecting an *hourly uplift* component group within the *physical bilateral contract data*, is the creation of a “Reallocate Quantity (RQ)”.

The RQ is:

- specific to a single *physical bilateral contract* and is exactly equal to the quantity of *energy* involved in the *physical bilateral contract* itself;
- specific to a single *market participant* and is equal to the sum of all RQ quantities for which the *market participant* is the *selling market participant*, minus the sum of all RQ quantities for which the *market participant* is the *buying market participant*;
- specific to a single *market participant* for a particular *hourly uplift* component group and is equal to the sum of all RQ quantities designated to for that particular *hourly uplift* component group within the *physical bilateral contract data* for which the *market participant* is the *selling market participant*, minus the sum of all RQ quantities for which the *market participant* is the *buying market participant*.
- applied to the calculation of the *settlement amounts* for each *charge type* associated with the *hourly uplift* component group as per Table 2-4.

Therefore, when calculating the RQ quantity for a particular *hourly uplift charge type* for *market participant* ‘k’ at a *delivery point* ‘m’ and *intertie metering point* ‘i’ in *metering interval* ‘t’ of *settlement hour* ‘h’, the reallocate quantity is expressed according the **MR Ch.9 Appendix 9.2 s.6.1.9:**

$$RQ_{k,h}^{m,i,t} = \left[\sum_B \frac{DAM_BCQ_{k,b,h}^{m,i}}{12} - \sum_S \frac{DAM_BCQ_{s,k,h}^{m,i}}{12} + \sum_B BCQ_{k,b,h}^{m,i,t} - \sum_S BCQ_{s,k,h}^{m,i,t} \right]$$

The RQ quantity is then used to either increase or decrease the *settlement amount* for the *hourly uplift charge type 'c'* in accordance with **MR Ch.9 s.3.10** as follows:

$$HUSA_{k,h} = HUSA_h \times \left[\frac{\sum^{M,T} (AQEW_{k,h}^{m,t} + SQEW_{k,h}^{i,t} + RQ_{k,h}^{m,i,t})}{\sum_K \sum^{M,T} (AQEW_{k,h}^{m,t} + SQEW_{k,h}^{i,t})} \right]$$

Note:

In the event that the term $(AQEW_{k,h}^{m,t} + SQEW_{k,h}^{i,t} + RQ_{k,h}^{m,i,t}) < 0$

Where:

$$RQ_{k,h}^{m,i,t} < 0 \text{ and } |RQ_{k,h}^{m,i,t}| > |(AQEW_{k,h}^{m,t} + SQEW_{k,h}^{i,t})| \text{ and } TD_{k,h,c} > 0$$

The calculation of the applicable *hourly uplift charge type 'c'* will yield a net credit to the *buying market participant* as a result of the reallocated quantity exceeding their actual/scheduled withdrawals of *energy* for the *metering interval 't'* in question.

The above mechanism applies to those "associated *charge types*" that are enumerated in the table at the beginning of this [section 2.4.3](#). Refer to [section 2.2](#) for specific listings of *charge types* and their respective equations.

- **End of Section** -

3. Inactive IESO Charge Types and Equations

The provisions of this section are applicable to those *IESO charge types* and equations that are no longer active, as further described in [section 1.2](#), and have been retained in the event that a re-calculation of the *charge type* is required.

All *market rule* and *market manual* references, in this section, are to those *market rules* and *market manuals* that were in effect prior to the MRP commencement date, unless otherwise stated.

3.1. Variable Descriptions

The following Table 3-1 contains descriptions of variables used within [section 3.2](#). Variables not defined in this table are as defined in section 2.1.

Table 3-1: Variable Descriptions for Inactive Charge Types and Equations

Key to the Table Below				
Variable used within Section 3	Data Description	Description	Market Rules Reference	Relation to the corresponding variable description within the IESO Market Rules
BR _r	Operating Reserve Offers	A matrix of <i>n price-quantity pairs</i> offered by <i>market participant 'k'</i> to supply class <i>r operating reserve</i> during <i>settlement hour 'h'</i> .	9.3.5.2	Same as <i>IESO market rules</i> .
CAEO ⁿ _{h,k}	Capacity Auction Energy Offer	<u>The quantity of <i>auction capacity</i> for <i>settlement hour 'h'</i> (in MW) made available by <i>capacity auction resource</i> for <i>capacity market participant 'k'</i> at <i>delivery point</i> or <i>inertie metering point 'm'</i> in the relevant <i>settlement hour</i> of the <i>availability window</i> determined as the lesser of the <i>resource's energy offers</i> submitted in the <i>day-ahead commitment process</i>, <i>pre-dispatch</i>, and <i>real-time energy market</i>, as applicable.</u>	9.3.1.10	Same as <i>IESO market rules</i>
CBMP _k	Total net volume of electricity withdrawn from the <i>IESO-controlled grid</i> by applicable Class B market participant or licensed	The total net volume of electricity withdrawn from the <i>IESO-controlled grid</i> by applicable Class B market participant (as that term is defined in the regulation) or licensed distributor that is a <i>market participant 'k'</i> for the month.	N/A	N/A – Refer to regulations.

Key to the Table Below				
Variable used within Section 3	Data Description	Description	Market Rules Reference	Relation to the corresponding variable description within the IESO Market Rules
	distributor that is also a <i>market participant</i> for the month			
CBRR	Global adjustment Class B recovery rate	Global Adjustment Class B recovery rate for the month per Ontario Regulation 429/04.	N/A	N/A – Refer to regulations.
CGC	Submitted Combined Guaranteed Costs	A financial amount consisting of fuel cost components defined on a <i>per-start</i> basis for a given <i>generation unit</i> calculated in a manner consistent with the applicable <i>market manual</i> , and encompassing the following elements: 1) Fuel and operation and maintenance (O&M) costs associated with unit synchronization to the <i>IESO-controlled grid</i> for a given start-up event (costs submitted via Online <i>IESO</i>). 2) Fuel and O&M costs associated with moving the <i>generation unit</i> from a valid start to its <i>minimum loading point</i> (costs submitted via Online <i>IESO</i>).	9.4.7B	Same as <i>IESO market rules</i> .
DA_BE _{k,h} ^{m,t}	<i>Energy Offer</i> submitted into the <i>schedule of record</i> at a <i>delivery point</i>	<i>Energy offers</i> submitted in day-ahead, represented as an N by 2 matrix of <i>price-quantity pairs</i> for each <i>market participant</i> 'k' at <i>delivery point</i> 'm' during <i>metering interval</i> 't' of <i>settlement hour</i> 'h' arranged in ascending order by the offered price in each <i>price-quantity pair</i> where offered prices 'P' are in column 1 and offered quantities 'Q' are in column 2.	9.3.1.2B.7	Same as <i>IESO market rules</i> .
DA_BE _{k,h} ^{i,t}	<i>Energy Offer</i> submitted into the <i>schedule of record</i> at a <i>intertie metering point</i>	<i>Energy offers</i> submitted in day-ahead, represented as an N by 2 matrix of <i>price-quantity pairs</i> for each <i>market participant</i> 'k' at <i>intertie metering point</i> 'i' during <i>metering interval</i> 't' of <i>settlement hour</i> 'h' arranged in ascending order by the offered price in each <i>price-quantity pair</i> where offered prices 'P' are in column 1 and offered quantities 'Q' are in column 2.	9.3.8A.2B and 9.3.8B.2	Same as <i>IESO market rules</i>
DA_BL _{k,h} ^{i,t}	<i>Energy Bids</i> submitted into the <i>schedule of record</i>	Energy bids submitted in day-ahead, represented as an N by 2 matrix of <i>price-quantity pairs</i> for each <i>market participant</i> 'k' at <i>intertie metering point</i> 'i' during <i>metering interval</i> 't' of <i>settlement hour</i> 'h' arranged in ascending order by the offered price in each <i>price-quantity pair</i> where offered prices 'P' are in column 1 and offered quantities 'Q' are in column 2.	9.3.1.2B.7 and 9.3.8D.2	Same as <i>IESO market rules</i>

Key to the Table Below				
Variable used within Section 3	Data Description	Description	Market Rules Reference	Relation to the corresponding variable description within the IESO Market Rules
DA_CGC	Submitted Day-Ahead Combined Guaranteed Costs	EFFECTIVE OCTOBER 13, 2011, THIS VARIABLE IS NO LONGER USED IN THE CALCULATION OF ANY SETTLEMENT. A financial amount consisting of fuel cost components defined on a <i>per-start</i> basis for a given <i>generation unit</i> calculated in a manner consistent with the applicable <i>market manual</i> , and encompassing the following elements: 1) Fuel and operation and maintenance (O&M) costs associated with unit synchronization to the <i>IESO-controlled grid</i> for a given start-up event (costs submitted via <i>IESO Gateway</i>). 2) Fuel and O&M costs associated with moving the <i>generation unit</i> from a valid start to its <i>minimum loading point</i> (costs submitted via <i>IESO Gateway</i>).	9.4.7D.1	Same as <i>IESO market rules</i>
DA_DQSI _{k,h} ^{m,t}	<i>Schedule of Record</i> Dispatch Quantity of Energy Scheduled for Injection at a delivery point	Day-ahead constrained quantity scheduled for injection by <i>market participant</i> 'k' at <i>delivery point</i> 'm' during <i>metering interval</i> 't' of <i>settlement hour</i> 'h'.	9.3.1.2A	Same as <i>IESO market rules</i> .
DA_DQSI _{k,h} ^{i,t}	<i>Schedule of Record</i> Dispatch Quantity of Energy Scheduled for Injection at an intertie metering point	Day-ahead constrained quantity scheduled for injection by <i>market participant</i> 'k' at <i>intertie metering point</i> 'i' during <i>metering interval</i> 't' of <i>settlement hour</i> 'h'.	9.3.1.2A	Same as <i>IESO market rules</i> .
DA_DQSW _{k,h} ^{i,t}	<i>Schedule of Record</i> Dispatch Quantity of Energy Scheduled for Withdrawal	Day-ahead constrained quantity scheduled for withdrawal by <i>market participant</i> 'k' at <i>intertie metering point</i> 'i' during <i>metering interval</i> 't' of <i>settlement hour</i> 'h'.	9.3.1.2A	Same as <i>IESO market rules</i> .
DA_ELMP _h ^{m,t}	<i>Pre-dispatch</i> constrained schedule price for an <i>intertie metering point</i> in the export zone	Day-ahead constrained schedule intertie price at the <i>delivery point</i> 'm' of the sink for the export transaction during <i>metering interval</i> 't' of <i>settlement hour</i> 'h'.	9.3.1.2A	Same as <i>IESO market rules</i> .
DA_ILMP _h ^{m,t}	<i>Pre-dispatch</i> constrained schedule price for an <i>intertie metering point</i> in the import zone	Day-ahead constrained schedule intertie price at the <i>delivery point</i> 'm' of the source for the import transaction during <i>metering interval</i> 't' of <i>settlement hour</i> 'h'.	9.3.1.2A	Same as <i>IESO market rules</i> .
DA_SNLC _{k,h} ^m	Speed-no-load costs submitted into the <i>schedule of record</i> at a <i>delivery point</i>	As-offered <i>speed-no-load cost</i> associated with <i>three-part offers</i> for a given <i>settlement hour</i> 'h' for <i>market participant</i> 'k' at <i>delivery point</i> 'm'.	9.3.1.2B.7	Same as <i>IESO market rules</i> .

Key to the Table Below				
Variable used within Section 3	Data Description	Description	Market Rules Reference	Relation to the corresponding variable description within the IESO Market Rules
DA_SNL _{k,h} ^p	Speed-no-load costs submitted into the <i>schedule of record at a pseudo-unit</i>	As-offered <i>speed-no-load cost</i> associated with <i>three-part offers</i> for a given <i>settlement hour 'h'</i> for <i>market participant 'k'</i> at <i>pseudo-unit 'p'</i> .	9.3.1.2B.7	Same as <i>IESO market rules</i> .
DA_SUC _{k,h} ^m	Start-up costs submitted into the <i>schedule of record at a delivery point</i>	As-offered <i>start-up cost</i> associated with <i>three-part offers</i> for a given <i>settlement hour 'h'</i> for <i>market participant 'k'</i> at <i>delivery point 'm'</i> where <i>settlement hour 'h'</i> is the initial hour in the DACP start event.	9.3.1.2B.7	Same as <i>IESO market rules</i> .
DA_SUC _{k,h} ^p	Start-up costs submitted into the <i>schedule of record at a pseudo-unit</i>	As-offered <i>start-up cost</i> associated with <i>three-part offers</i> for a given <i>settlement hour 'h'</i> for <i>market participant 'k'</i> at <i>pseudo-unit 'p'</i> where <i>settlement hour 'h'</i> is the initial hour in the DACP start event.	9.3.1.2B.7	Same as <i>IESO market rules</i> .
DIPC _{k,h} ^{m,t}	Derived Interval Price Curve	<i>Energy price curves</i> derived per interval from submitted hourly day-ahead PSU <i>energy offers</i> , represented as a N by 2 matrix of <i>price-quantity pairs</i> for each <i>market participant 'k'</i> at <i>delivery point 'm'</i> (where <i>'m'</i> is a CT or ST delivery point) during <i>metering interval 't'</i> of <i>settlement hour 'h'</i> arranged in ascending order by the offered price in each <i>price quantity pair</i> where offered prices <i>'P'</i> are in column 1 and offered quantities <i>'Q'</i> are in column 2.	9.3.1.11	Same as <i>IESO market rules</i> . Refer to Market Manual 9.5, Appendix B for a detailed description of DIPC.
DIGQ _{k,h} ^{m,t}	Derived Interval Guaranteed Quantity	Portion of the day-ahead constrained quantity scheduled for injection that is eligible for DA-PCG for <i>market participant 'k'</i> at <i>pseudo unit 'p'</i> during <i>metering interval 't'</i> of <i>settlement hour 'h'</i>	9.3.1.11	Same as <i>IESO market rules</i> . Refer to Market Manual 9.5, Appendix C for a detailed description of DIGQ.
DQSI _{k,h} ^{m,t}	Dispatch Quantity of Energy Scheduled for Injection	Dispatch quantity of <i>energy</i> scheduled for injection in the <i>real-time schedule</i> by <i>market participant 'k'</i> at location <i>'m'</i> in <i>metering interval 't'</i> of <i>settlement hour 'h'</i> .	9.3.1.3 and 9.3.1.4A	Same as <i>IESO market rules</i> . N.B. Location m is further subject to the functional deferral described in section 3.1.4A of Chapter 9 of the <i>market rules</i> (ref. 9.3.1.4A).
DQSR _{r,k,h} ^{m,t}	Dispatch Quantity Schedule of Operating Reserve	Dispatch quantity schedule of <i>class r reserve</i> for <i>market participant 'k'</i> at location <i>'m'</i> in <i>metering interval 't'</i> of <i>settlement hour 'h'</i> .	9.3.1.4 and 9.3.1.4A	Same as <i>IESO market rules</i> . N.B. Location m is further subject to the functional deferral described in section 3.1.4A of Chapter 9 of the <i>market rules</i> (ref. 9.3.1.4A).

Key to the Table Below				
Variable used within Section 3	Data Description	Description	Market Rules Reference	Relation to the corresponding variable description within the IESO Market Rules
DQSW _{k,h^{m,t}}	Dispatch Quantity of Energy Scheduled for Withdrawal	Dispatch quantity of <i>energy</i> scheduled for withdrawal in the <i>real-time schedule</i> by <i>market participant</i> 'k' at location 'm' in <i>metering interval</i> 't' of <i>settlement hour</i> 'h'.	9.3.1.3 and 9.3.1.4A	Same as <i>IESO market rules</i> . N.B. Location m is further subject to the functional deferral described in section 3.1.4A of Chapter 9 of the <i>market rules</i> (ref. 9.3.1.4A).
DRACP	Demand Response Auction Clearing Price	The <i>demand response auction clearing price</i> for the <i>commitment period</i> and zone.	N/A	Refer to Market Manual 5.5
DRACP _h	Hourly Demand Response Auction Clearing Price	The <i>demand response auction clearing price</i> for the <i>commitment period</i> and zone divided by the hours of availability for a day.	N/A	Refer to Market Manual 5.5
DREBQ _{k,h^m}	<u>Demand Response Energy Bid Quantity</u>	<u>The quantity (in MW) of auction capacity made available by an hourly demand response resource or capacity dispatchable load resource for capacity market participant 'k' at delivery point 'm' in settlement hour 'h' of the availability window, determined as the lesser of the resource's energy bids submitted in the day-ahead commitment process, pre-dispatch, and real-time energy market, as applicable, and where such value exceeds the CARC_{k^m} for the resource in the relevant energy market billing, the DREBQ_{k,h^m} shall equal such CARC_{k^m}</u>	<u>9.3.1.10</u>	<u>Same as IESO market rules</u>
DRBOC _k	Demand Response Buy-Out Capacity	The buy-out capacity is an amount that is being reduced from the <i>demand response capacity obligation</i> for <i>demand response market participant</i> 'k'.	N/A	Refer to Market Manual 5.5

Key to the Table Below				
Variable used within Section 3	Data Description	Description	Market Rules Reference	Relation to the corresponding variable description within the IESO Market Rules
DRCO _k	Demand Response Capacity Obligation (MW)	The <i>demand response capacity obligation</i> amount for the <i>commitment period</i> and zone for <i>demand response market participant</i> 'k'. The initial capacity obligation is acquired through the <i>demand response auction</i> and subject to being reduced via the buy-out process.	N/A	Refer to Market Manual 5.5
DRNPF	Demand Response Non-Performance Factor	The non-performance factor as listed in section 7.1 of Market Manual 12 that corresponds and applies to the month being settled.	N/A	Refer to Market Manual 5.5
EIM _{k,h}	Operating Profit Function for the IMPORT of Energy under the Intertie Offer/Bid Guarantee Settlement Credit	This Operating Profit function is used for the calculation of the Intertie Offer/Bid Guarantee Settlement Credit (IOBG) with respect the IMPORT of <i>energy</i> .	9.3.8A	EIM _{k,h} IS NOT A VARIABLE EIM _{k,h} is the output of a particular usage of the Operating Profit (OP) function defined within Chapter 9, section 3.8A. EIM _{k,h} Input variables into the Operating Profit (OP) Function include: MQSI, EMP, and BE.
EMP _n ^{i,t}	5-minute Energy Market Price at the Interties	Energy <i>market price</i> applicable to <i>intertie metering point</i> 'i' in <i>metering interval</i> 't' of <i>settlement hour</i> 'h'.	9.3.1.3	Same as <i>IESO market rules</i> .
EMP _n ^{m,t}	5-minute Energy Market Price within Ontario	Energy <i>market price</i> applicable to <i>RWM</i> 'm' in <i>metering interval</i> 't' of <i>settlement hour</i> 'h'.	9.3.1.3	Same as <i>IESO market rules</i> .
EMP _n ^{REF,t}	5-minute Energy Market Reference Price	Reference energy <i>market price</i> used to value losses in the calculation of the <i>Transmission Charge Reduction Fund</i> ³ during in <i>metering interval</i> 't' of <i>settlement hour</i> 'h'.	9.3.1.3 and 9.3.6.2	Same as <i>IESO market rules</i> .
FP _n ^m	Fixed Energy Rate	A fixed <i>energy rate</i> for all <i>metering intervals</i> in <i>settlement hour</i> 'h'.	N/A – subject to regulations made pursuant to <i>Ontario Energy Board Act, 1998</i> until March 31, 2005 and by the <i>OEB</i> under such regulations	N/A – Refer to regulations.

³ *Market Rules* ref.: Section 3.6.2 of Chapter 9.

Key to the Table Below				
Variable used within Section 3	Data Description	Description	Market Rules Reference	Relation to the corresponding variable description within the IESO Market Rules
			commencing April 1, 2005.	
FPC _h ^m	Rate for a designated group of <i>charge types</i> (refer to description of <i>charge type</i> 141)	This variable is reserved for <i>charge type</i> 141 and applies with respect to charges for the period commencing December 1, 2002 and ending March 31, 2005. Refer to Ontario Regulation 436/02 and Ontario Regulation 98/05.	N/A – subject to regulations made pursuant to <i>Ontario Energy Board Act, 1998</i> .	N/A – Refer to regulations
HOEP _h	Hourly Ontario Energy Price	<i>Hourly Ontario Energy Price</i> in <i>settlement hour</i> 'h'.	9.3.1.3	Same as <i>IESO market rules</i> .
IOG_FV _{k,h} ⁱ	IOG Floor Value	<p>EFFECTIVE OCTOBER 13, 2011, THIS VARIABLE IS NO LONGER USED IN THE CALCULATION OF ANY SETTLEMENT.</p> <p>The IOG_FV_{k,h}ⁱ is a floor value (in dollars to the nearest cent) derived from:</p> <ul style="list-style-type: none"> The day-ahead offer prices for the import transaction submitted by the <i>market participant</i> over the range of the <i>pre-dispatch of record</i> constrained quantity scheduled for that import transaction; and <i>Real-time</i> offer prices for the import transaction at the corresponding location in the corresponding <i>settlement hour</i> for any additional <i>energy</i> scheduled above and beyond the <i>pre-dispatch of record</i> constrained quantity scheduled for that import transaction: <p>NOTE: The IOG_FV_{k,h}ⁱ is formulated in the manner described in Chapter 9, section 3.8A.8 of the <i>IESO market rules</i> and is used in the formulation of the <i>intertie offer guarantee adjustment</i> (refer to also, section 2.2 entry for <i>charge type</i> 1137 within this document).</p>	9.3.8A.8	<p>Same as <i>IESO market rules</i></p> <p>Refer to Chapter 9, section 3.8A.8 for details concerning its formulation.</p>
MDCAA	Monthly deferred Class A amount to be recovered	The monthly deferred Class A amount to be recovered which equals one twelfth of the total Global Adjustment allocated to Class A customers that was deferred in April, May and June of 2020.	N/A	N/A – Refer to regulations.
MDCBA	Monthly deferred Class B amount to be recovered	The monthly deferred Class B amount to be recovered equals one twelfth of the total Global Adjustment	N/A	N/A – Refer to regulations.

Key to the Table Below				
Variable used within Section 3	Data Description	Description	Market Rules Reference	Relation to the corresponding variable description within the IESO Market Rules
		allocated to Class B customers that was deferred in April, May and June of 2020.		
MC_h^m	Minimum Consumption	Used for the OR non-accessibility charges and the calculation of the self-induced dispatchable load CMSC clawback under Business Rule 2. The minimum consumption is equal to the quantity in the price quantity pair where the bidding price is MMCP (i.e., \$2000) at <i>RWM metering point</i> 'm' for settlement hour 'h'.	9.3.5.1A, 9.3.4.2	
MI	Ordered matrix of $MQSI_{k,h}^{i,t}$ and corresponding IOG <i>settlement amounts</i>	Used for the calculation of the IOG OFFSET <i>settlement amount</i> . A matrix of X pairs of <i>market schedule</i> quantities scheduled for injection by <i>market participant</i> 'k' at all <i>intertie metering points</i> 'i' in <i>metering interval</i> 't' of <i>settlement hour</i> 'h' ($MQSI_{k,h}^{i,t}$) paired with the corresponding component of the intertie offer guarantee settlement credit for each <i>intertie metering point</i> 'i'. Refer to equation in Chapter 9, section 3.8A.4 of the <i>IESO market rules</i> for further details.	9.3.8A.4	Same as <i>IESO market rules</i> .
$MLP_{k,h}^{m,t}$	Minimum Loading Point	Minimum output of <i>energy</i> the <i>market participant</i> 'k' at <i>delivery point</i> 'm' can maintain without ignition support in <i>metering interval</i> 't' of <i>settlement hour</i> 'h'.	9.3.1.2B.7	Same as <i>IESO market rules</i> .
$MLP_CONS_{k,h}^{m,t}$	Minimum Loading Point for a steam turbine resource or a combustion turbine resource associated to a pseudo unit	Minimum output of <i>energy</i> the <i>market participant</i> 'k' at <i>delivery point</i> 'm' can maintain without ignition support in <i>metering interval</i> 't' of <i>settlement hour</i> 'h'.	9.3.1.2B.7	Same as <i>IESO market rules</i> . Refer to Market Manual 9.4, section 4.1.2.2 for a detailed description of constraints applied for PCG eligible combined cycle plants.
$MQSI_{k,h}^{m,t}$	Market Quantity Scheduled for Injection	Market quantity scheduled for injection in the <i>market schedule</i> by <i>market participant</i> 'k' at <i>RWM</i> or <i>intertie metering point</i> 'm' in <i>metering interval</i> 't' of <i>settlement hour</i> 'h'.	9.3.1.3	Same as <i>IESO market rules</i> .
$MQSI\{adj\}_{k,h}^{m,t}$	Adjusted Market Quantity Scheduled for Injection	<u>EFFECTIVE OCTOBER 13, 2011, THIS VARIABLE IS NO LONGER USED IN THE CALCULATION OF ANY SETTLEMENT. Used for the calculation of the IOG OFFSET settlement amount. $MQSI\{adj\}_{k,h}^{i,t}$ is each (and where applicable, adjusted) quantity of energy scheduled for injection in the market schedule by market participant 'k' at an intertie metering point 'i' in metering interval 't' of</u>	9.3.8A.4	Same as <i>IESO market rules</i> .

Key to the Table Below				
Variable used within Section 3	Data Description	Description	Market Rules Reference	Relation to the corresponding variable description within the IESO Market Rules
		<u>settlement hour 'h' corresponding with each quantity, $MQSIx^{*,k,h}$ i,t in matrix MI, row $x^{*,s}$</u>		
$MQSW_{k,h}^{m,t}$	Market Quantity Scheduled for Withdrawal	Market quantity scheduled for withdrawal in the <i>market schedule</i> by <i>market participant</i> 'k' at <i>RWM</i> or <i>inertie metering point</i> 'm' in <i>metering interval</i> 't' of <i>settlement hour</i> 'h'.	9.3.1.3	Same as <i>IESO market rules</i> .
ONPAO	Ontario Power Generation Non-Prescribed Assets Output	<p>OPG's Non-Prescribed Assets are those generation assets operated and controlled by Ontario Power Generation in service as of January 1, 2006, excluding Lennox Generating Station, that are not prescribed assets under section 78.1 of the <i>Ontario Energy Board Act, 1998</i> as amended by the "Electricity Restructuring Act, 2004".</p> <p>ONPAO refers to the generation output from OPG's Non-Prescribed Assets, over each hour of the quarter adjusted to take account of volumes sold through forward contracts in effect as of January 1, 2005. For greater certainty, any output from ONPA resulting from fuel conversion by Ontario Power Generation in ONPA, or incremental output from ONPA resulting from refurbishment or expansion is to be excluded from ONPAO.</p> <p>Incremental Output is defined as: generation output x (new total installed capacity – installed capacity as of January 1, 2006) / new total installed capacity.</p>	N/A	The formula for calculating the OPG Rebate is subject to Ministerial Directive made under Order-in-Council 1062/2006 (May 17, 2006).
OP	Operating Profit Function	The Operating Profit function is used for the calculation of the Congestion Management Settlement Credit (CMSC) with respect to constrained on/off payments for <i>energy</i> , <i>operating reserve</i> . It is also used for the calculation of the Day-Ahead Production Cost Guarantee components, the Day-Ahead Generator Withdrawal Charge, the Day-Ahead Import and Export failure charges, and the Import Offer Guarantee Settlement Credit.	9.3.5.2 and 9.3.8A.2	<p>OP IS NOT A VARIABLE</p> <p>OP is a mathematical function defined within Chapter 9, section 3.5.2. of the <i>IESO market rules</i></p> <p>Input variables include: MQSI, MQSW, SQROR and AQEI, AQEW, AQOR SQEI, SQEW, DSQI, DSQW, DSQR DA_DQSI, DA_DQSW, PD_DQSI, PD_DQSW</p>

Key to the Table Below				
Variable used within Section 3	Data Description	Description	Market Rules Reference	Relation to the corresponding variable description within the IESO Market Rules
				<p>BE, BL, BR, PD_BE, PD_BL DA_BE, DA_BL EMP MLP, MLP CONS DIPC OPCAP</p> <p>OP is also used within Chapter 9, section 9.8A.2 of the <i>IESO market rules</i> to derive the Energy Import (EIM_{k,h}) sub-component of the Intertie Offer Settlement Credit (IOG) using the following input variables:</p> <p>MQSI BE EMP</p>
OPCAP _{k,h^{m,t}}	Operating Capacity	De-rating of the generation unit by <i>market participant</i> 'k' at <i>delivery point</i> 'm' in <i>metering interval</i> 't' of <i>settlement hour</i> 'h'.	9.3.1.2B.7	Same as <i>IESO market rules</i> .
OPE{adj} _{k,hⁱ}	Adjusted CMSC component for energy used in the DA-Ahead IOG	<p>EFFECTIVE OCTOBER 13, 2011, THIS VARIABLE IS NO LONGER USED IN THE CALCULATION OF ANY SETTLEMENT.</p> <p>This congestion management <i>settlement credit settlement amount</i> (CMSC) component is specifically used in the calculation of the Day-Ahead IOG for import transactions that are subject to a <i>constrained-on event</i> in the <i>real-time market</i>.</p> <p>OPE{adj}_{k,hⁱ} is an adjusted component of The congestion management <i>settlement credit settlement amount</i> (CMSC) for <i>market participant</i> 'k' at <i>intertie metering point</i> 'i' for <i>settlement hour</i> 'h' in which the constrained</p>	9.3.8A.2A	'OP' is a mathematical function used within Chapter 9, section 9.3.8A.2A of the <i>IESO market rules</i> to derive Day-Ahead Intertie Offer Guarantee. Please refer to the <i>market rules</i> for information regarding its formulation.

Key to the Table Below				
Variable used within Section 3	Data Description	Description	Market Rules Reference	Relation to the corresponding variable description within the IESO Market Rules
		schedule is the lesser of $PDR_DQSI_{k,h}^{i,t}$ or $DQSI_{k,h}^{i,t}$ but in all instances, greater than or equal to $MQSI_{k,h}^{i,t}$.		
ORL	Ontario Power Generation Revenue Limit	For the period May 1, 2006 to April 30, 2007 ORL is equal to \$46/ MWh. For the period May 1, 2007 to April 30, 2008 ORL is equal to \$47/ MWh. For the period May 1, 2008 to April 30, 2009 ORL is equal to \$48/ MWh.	N/A	The formula for calculating the OPG Rebate is subject to Ministerial Directive made under Order-in-Council 1062/2006 (May 17, 2006).
PAA	Pilot Auction Amount	Refers to the Pilot Auction administered by the <i>Ontario Power Authority</i> in the first half of 2006. The volume in MWh over each hour in the quarter that is sold by Ontario Power Generation through the PA.	N/A	The formula for calculating the OPG Rebate is subject to Ministerial Directive made under Order-in-Council 1062/2006 (May 17, 2006).
PAORL	Pilot Auction Ontario Power Generation Revenue Limit	For the period May 1, 2006 to April 30, 2007 PAORL is equal to \$51/ MWh. For the period May 1, 2007 to April 30, 2008 PAORL is equal to \$52/ MWh. For the period May 1, 2008 to April 30, 2009 PAORL is equal to \$53/ MWh.	N/A	The formula for calculating the OPG Rebate is subject to Ministerial Directive made under Order-in-Council 1062/2006 (May 17, 2006).
PAP	Pilot Auction Price	The weighted average auction price in \$/ MWh over each hour of the quarter realized for the PAA by Ontario Power Generation.	N/A	The formula for calculating the OPG Rebate is subject to Ministerial Directive made under Order-in-Council 1062/2006 (May 17, 2006).
$PD_BE_{k,h}^{i,t}$	<i>Energy Offer</i> submitted into the Pre-dispatch	<i>Energy offers</i> submitted in Pre-dispatch, represented as an N by 2 matrix of <i>price-quantity pairs</i> for each <i>market participant 'k'</i> at <i>intertie metering point 'i'</i> during <i>metering interval 't'</i> of <i>settlement hour 'h'</i> arranged in ascending order by the offered price in each <i>price quantity pair</i> where offered prices 'P' are in column 1 and offered quantities 'Q' are in column 2.	9.3.1.2D	Same as <i>IESO market rules</i> .
$PD_BL_{k,h}^{i,t}$	<i>Energy Bid</i> submitted into the Pre-dispatch	Energy bids submitted in <i>pre-dispatch</i> , represented as an N by 2 matrix of <i>price-quantity pairs</i> for each <i>market participant 'k'</i> at <i>intertie metering point 'i'</i> during <i>metering</i>	9.3.1.2D	Same as <i>IESO market rules</i> .

Key to the Table Below

				<p>Business Rule 3 – Dispatch Deviation: <i>Constrained off</i> CMSC is not allowed for an interval during a <i>constrained off</i> event if the current 5-minute constrained schedule exceeds the revenue meter value in the previous interval plus 2.5 minutes of ramping. This business rule applies unless CMSC is allowed because of:</p> <ul style="list-style-type: none"> • Materiality (defined by Business Rule 1); or • The load has been <i>constrained off</i> economically (defined below – ‘Economically <i>constrained off</i> interval’); or • Operating reserve has been activated (defined below – ‘Operating Reserve Activation interval’); or • The load is ramping (defined below – ‘Ramping interval’); or • The load has been manually dispatched down for reliability (defined below – ‘Manual Dispatch for Reliability’). <p>Business Rule 4 – Facility off-line or unable to follow dispatch instructions: <i>Constrained off</i> CMSC is not allowed for an interval during a <i>constrained off</i> event if the constrained schedule is 0 MW and the consumption is less than 1 MW, or if the consumption is 0 MW. This business rule applies unless CMSC is allowed because of:</p> <ul style="list-style-type: none"> • Materiality (defined by Business Rule 1); or • The load has been <i>constrained off</i> economically (defined below – ‘Economically <i>constrained off</i> interval’); or • Operating reserve has been activated (defined below – ‘Operating Reserve Activation interval’); or • The load has been manually dispatched down for reliability (defined below – ‘Manual Dispatch for Reliability’). <p>In addition to the Business Rules 1 to 4 described above, <i>constrained off</i> CMSC is not allowed for hour ‘h’ if a <i>dispatchable load</i> changes its <i>energy bid</i> that results in a change in the <i>facility’s market schedule</i> and the ramping up or down of the <i>dispatchable load</i>.</p>

				<p>DEFINITIONS – There are a number of definitions that are used in the specification of criteria for recovery of <i>constrained off</i> CMSC paid to dispatchable load facilities. These are:</p> <p>Constrained-off event: A <i>constrained off</i> event comprises one or more consecutive intervals where the <i>market schedule</i> is greater than the constrained schedule and the <i>market schedule</i> is greater than the actual quantity of energy withdrawn. Both conditions must exist to be considered a <i>constrained off</i> event.</p> <p>Economic Constrained-off interval: A <i>dispatchable load</i> is considered to be 'economically <i>constrained off</i>' in an interval if the relevant nodal price is greater than or equal to the <i>bid</i> price for either the current interval, the next interval or the previous interval. The inequality should be applied to the last MW <i>constrained off</i>.</p> <p>Operating Reserve Activation Interval (ORA): A <i>dispatchable load</i> is considered to be dispatched in an interval as part of an activation of <i>operating reserve</i> if one or more of the following conditions exist:</p> <ol style="list-style-type: none"> The constrained schedule is labeled with the reason code 'ORA'. The interval is 1-3 intervals before an interval with the 'ORA' code. The interval is 1-3 intervals after an interval with the 'ORA' code. <p>Ramping Interval: A <i>generation unit</i> is considered to be ramping up or ramping down when the unconstrained schedule differs between consecutive hours. A <i>dispatchable load</i> is considered to be 'ramping' in an interval if one of the following exist:</p> <ol style="list-style-type: none"> It is one of the first 3 intervals of the second hour when ramping up. It is one of the last 3 intervals of the first hour when ramping down. <p>Manual Dispatch for Reliability: A <i>dispatchable load</i> is considered to be a 'manually <i>constrained off</i> for reliability' if the <i>IESO</i> Control Room logs indicate that the <i>IESO</i> needed to constrain off the load for system or for local requirements.</p>

3.4. Rounding Conventions – by Charge Type

Refer to [section 2.3](#) for general information regarding the contents of this Table 3-4 and a description of each column heading.

Table 3-4: Rounding Conventions by Charge Type

Charge Type Number	Charge Type Name	INPUT VARIABLES Least number of significant digits to the right of the decimal	INPUT VARIABLES Maximum number of significant digits to the right of the decimal	Intermediate Rounding done by Settlements?	INTERMEDIATE CALCULATION 1 (where intermediate rounding occurs)	DISPOSITION OF INTERMEDIATE CALCULATION 1	INTERMEDIATE CALCULATION 2 (where intermediate rounding occurs)	DISPOSITION OF INTERMEDIATE CALCULATION 2
100	Net Energy Market Settlement for Generators and Dispatchable Load	1	3	Yes	Numerator: BCQ Denominator: 12 Resulting Decimals: 3	BCQ quantities Multiplied by EMP when applicable.		
101	Net Energy Market Settlement for Non-dispatchable Load	1	3	Yes	Numerator: BCQ Denominator: 12 Resulting Decimals: 3	BCQ quantities Multiplied by EMP when applicable.		
103	Transmission Charge Reduction Fund	2	3	Yes	Numerator: Difference between SQEW – SQEI by <i>intertie zone</i> Denominator: 12 Resulting Decimals: 3	Resulting value included with the TCRF calculation at that particular zone for the <i>metering interval</i> in question.		
104	Transmission Rights Settlement Credit	0	2	Yes	Numerator: Summation of the zonal price difference ($EMP_{n,j,t} - EMP_{h,i,t}$) Denominator: 12 Resulting Decimals: 5	Multiplied by QTR for the <i>settlement hour</i> .		

Charge Type Number	Charge Type Name	INPUT VARIABLES Least number of significant digits to the right of the decimal	INPUT VARIABLES Maximum number of significant digits to the right of the decimal	Intermediate Rounding done by Settlements?	INTERMEDIATE CALCULATION 1 (where intermediate rounding occurs)	DISPOSITION OF INTERMEDIATE CALCULATION 1	INTERMEDIATE CALCULATION 2 (where intermediate rounding occurs)	DISPOSITION OF INTERMEDIATE CALCULATION 2
105	Congestion Management Settlement Credit for Energy	1	3	Yes	AQEI multiplied by 12 or AQEW multiplied by 12 Resulting Decimals: 3	Used in the calculation of OP(EMP, AQEI, BE) or OP(EMP, AQEW, BL) as the case may be.	Numerators OP(EMP, MQSI, BE) OP(EMP, DQSI, BE) OP(EMP, AQEI, BE) OP(EMP, MQSW, BL) OP(EMP, DQSW, BL) OP(EMP, AQEW, BL) Denominator: 12 Resulting Decimals: 2	Profits compared as applicable.
106	Congestion Management Settlement Credit for 10 Minute Spinning Reserve	1	2	Yes	Numerators OP(PROR, MQSR, BR) OP(PROR, DQSR, BR) OP(PROR, AQOR, BR) Denominator: 12 Resulting Decimals: 2	Profits compared as applicable.		
107	Congestion Management Settlement Credit for 10 Minute Non-spinning Reserve	1	2	Yes	Numerators OP(PROR, MQSR, BR) OP(PROR, DQSR, BR) OP(PROR, AQOR, BR) Denominator: 12 Resulting Decimals: 2	Profits compared as applicable.		
108	Congestion Management Settlement Credit for 30 Minute Operating Reserve	1	2	Yes	Numerators OP(PROR, MQSR, BR) OP(PROR, DQSR, BR) OP(PROR, AQOR, BR) Denominator: 12 Resulting Decimals: 2	Profits compared as applicable.		

Charge Type Number	Charge Type Name	INPUT VARIABLES Least number of significant digits to the right of the decimal	INPUT VARIABLES Maximum number of significant digits to the right of the decimal	Intermediate Rounding done by Settlements?	INTERMEDIATE CALCULATION 1 (where intermediate rounding occurs)	DISPOSITION OF INTERMEDIATE CALCULATION 1	INTERMEDIATE CALCULATION 2 (where intermediate rounding occurs)	DISPOSITION OF INTERMEDIATE CALCULATION 2
111	Northern Pulp and Paper Mill Electricity Transition Program Settlement Amount	1	3	No				
112	Ontario Power Generation Rebate	2	3	No				
113	Additional Compensation for Administrative Pricing Credit	1	3	Yes	For the calculation outlined in 7.8.4A.16 only: for dispatchable <i>facilities</i> located within Ontario only AQEI multiplied by 12 or AQEW multiplied by 12 Resulting Decimals: 3	(For the calculation outlined in 7.8.4A.16 only) For dispatchable <i>facilities</i> located within Ontario only: Used in the calculation of OP(EMP, AQEI, BE) or OP(EMP, AQEW, BL) as the case may be.	For the calculation outlined in 7.8.4A.16 only: Numerators: for dispatchable <i>facilities</i> located within Ontario: OP(EMP, AQEI, BE) OP(EMP, AQEW, BL) for Imports or Exports: OP(EMP, DQSI, BE) OP(EMP, DQSW, BL) Denominator: 12 Resulting Decimals: 2	(For the calculation outlined in 7.8.4A.16 only) The results are used in the final calculation
119	Station Service Reimbursement Credit	2	2	No				
120	Local Market Power Debit	2	2	No				

Charge Type Number	Charge Type Name	INPUT VARIABLES Least number of significant digits to the right of the decimal	INPUT VARIABLES Maximum number of significant digits to the right of the decimal	Intermediate Rounding done by Settlements?	INTERMEDIATE CALCULATION 1 (where intermediate rounding occurs)	DISPOSITION OF INTERMEDIATE CALCULATION 1	INTERMEDIATE CALCULATION 2 (where intermediate rounding occurs)	DISPOSITION OF INTERMEDIATE CALCULATION 2
121	Northern Industrial Electricity Rate Program Settlement Amount	1	3	No				
122	Ramp Down Settlement Amount	1	3	Yes	AQEI multiplied by 12 or AQEW multiplied by 12 Resulting Decimals: 3	Used in the calculation of OP(EMP, AQEI, BE) or OP(EMP, AQEW, BL) as the case may be.	Numerators OP(EMP, MQSI, BE) OP(EMP, DQSI, BE) OP(EMP, AQEI, BE) OP(EMP, MQSW, BL) OP(EMP, DQSW, BL) OP(EMP, AQEW, BL) Denominator: 12 Resulting Decimals: 2	Profits compared as applicable.
124	SEAL Congestion Management Settlement Credit Amount	2	2	No				
130	Intertie Offer Settlement Credit – Energy	1	3	Yes	Numerators OP(EMP, MQSI, BE) Denominator: 12 Resulting Decimals: 2	Profits compared as applicable.		
133	Generator Cost Guarantee Payment	1	3	No				
134	Demand Response Credit	2	2	No				

Charge Type Number	Charge Type Name	INPUT VARIABLES Least number of significant digits to the right of the decimal	INPUT VARIABLES Maximum number of significant digits to the right of the decimal	Intermediate Rounding done by Settlements?	INTERMEDIATE CALCULATION 1 (where intermediate rounding occurs)	DISPOSITION OF INTERMEDIATE CALCULATION 1	INTERMEDIATE CALCULATION 2 (where intermediate rounding occurs)	DISPOSITION OF INTERMEDIATE CALCULATION 2
135	Real-time Import Failure Charge	1	3	Yes	TERM 1 – Failure Charge Numerator: $EMP + PB_IM - PD_EMP$ Denominator: 12 Resulting Decimals: 2 TERM 2 – Price Cap Numerator: $MAX(0, EMP) * RT_ISD$ Denominator: 12 Resulting Decimals: 2	TERM 1 and TERM 2 compared as applicable.		
136	Real-time Export Failure Charge	1	3	Yes	TERM 1 – Failure Charge Numerator: $PD_EMP - EMP - PB_EX$ Denominator: 12 Resulting Decimals: 2 TERM 2 – Price Cap Numerator: $MAX(0, PD_EMP) * RT_ESD$ Denominator: 12 Resulting Decimals: 2	TERM 1 and TERM 2 compared as applicable.		

Charge Type Number	Charge Type Name	INPUT VARIABLES Least number of significant digits to the right of the decimal	INPUT VARIABLES Maximum number of significant digits to the right of the decimal	Intermediate Rounding done by Settlements?	INTERMEDIATE CALCULATION 1 (where intermediate rounding occurs)	DISPOSITION OF INTERMEDIATE CALCULATION 1	INTERMEDIATE CALCULATION 2 (where intermediate rounding occurs)	DISPOSITION OF INTERMEDIATE CALCULATION 2
137	Generation Cost Guarantee – Output-Based Pricing System Reimbursement Settlement Amount Generation Cost Guarantee – Annual Carbon Charge Settlement Amount	1	3	No				
140	Fixed Energy Rate Settlement Amount	1	3	No				
141	Fixed Wholesale Charge Rate Settlement Amount	1	3	No				
142	Regulated Price Plan Settlement Amount	1	3	No				
144	Regulated Nuclear Generation Adjustment Amount	1	3	No				
145	Regulated Hydroelectric Generation Adjustment Amount	1	3	No				

Charge Type Number	Charge Type Name	INPUT VARIABLES Least number of significant digits to the right of the decimal	INPUT VARIABLES Maximum number of significant digits to the right of the decimal	Intermediate Rounding done by Settlements?	INTERMEDIATE CALCULATION 1 (where intermediate rounding occurs)	DISPOSITION OF INTERMEDIATE CALCULATION 1	INTERMEDIATE CALCULATION 2 (where intermediate rounding occurs)	DISPOSITION OF INTERMEDIATE CALCULATION 2
146	Global Adjustment Settlement Amount	1	3	No				
150	Net Energy Market Settlement Uplift	1	3	No				
155	Congestion Management Settlement Uplift	1	3	No				
161	Northern Pulp and Paper Mill Electricity Transition Program Balancing Amount	1	3	No				
162	Ontario Power Generation Rebate Debit	1	3	No				
163	Additional Compensation for Administrative Pricing Debit	1	3	No				
170	Local Market Power Rebate	1	3	No

3.5. Settlement of Physical Bilateral Contracts

3.5.1. Governing Rules

Settlement of physical bilateral contracts is discussed in section 2.1 of Chapter 8, of the *IESO market rules*. In summary this particular *market rules* section prescribes the prices to be applied to a *Physical Bilateral Contract Quantity of Energy Sold* ($BCQ_{k,b,h}^{m,t}$) or a *Physical Bilateral Contract Quantity of Energy Bought* ($BCQ_{s,k,h}^{m,t}$) at a *delivery point* or an *intertie metering point*. This treatment is summarized in the table below with respect to each *settlement* variable defined in [section 3.1](#) and *charge type* described in [section 3.2](#) of this document.

Table 3-5: Energy Pricing – Location of Bilateral Contract

Location of Bilateral Contract	Settlement of Selling Market Participant	Settlement of Buying Market Participant	Charge Type
Non-dispatchable <i>delivery point</i>	<ul style="list-style-type: none"> Debit the Physical Bilateral Contract Quantity of Energy Sold ($BCQ_{k,b,h}^{m,t}$) at the 5-Minute Energy Market Price within Ontario ($EMP_h^{m,t}$). 	<ul style="list-style-type: none"> Credit the Physical Bilateral Contract Quantity of Energy Bought ($BCQ_{s,k,h}^{m,t}$) at the <i>Hourly Ontario Energy Price</i> (HOEP). 	101
Dispatchable <i>delivery point</i>	<ul style="list-style-type: none"> Debit the Physical Bilateral Contract Quantity of Energy Sold ($BCQ_{k,b,h}^{m,t}$) at the 5-Minute Energy Market Price within Ontario ($EMP_h^{m,t}$). 	<ul style="list-style-type: none"> Credit the Physical Bilateral Contract Quantity of Energy Bought ($BCQ_{s,k,h}^{m,t}$) at the 5-Minute Energy Market Price within Ontario ($EMP_h^{m,t}$). 	100
<i>Intertie Metering Point</i>	<ul style="list-style-type: none"> Debit the Physical Bilateral Contract Quantity of Energy Sold ($BCQ_{k,b,h}^{m,t}$) at the 5-minute Energy Market Price at the <i>Interties</i> ($EMP_h^{i,t}$). 	<ul style="list-style-type: none"> Credit the Physical Bilateral Contract Quantity of Energy Bought ($BCQ_{s,k,h}^{m,t}$) at the 5-minute Energy Market Price at the <i>Interties</i> ($EMP_h^{i,t}$). 	100

These financial credits and debits are then included the overall *settlement amounts* calculated for *charge types* 100 and 101 as per the equations in [section 3.2](#).

3.5.2. The Nature of the Bilateral Contract Quantity

Table 3-6: Bilateral Contract Quantities

Variable	Name	Description
$BCQ_{s,k,h}^{m,t}$	Physical Bilateral Contract Quantity of Energy bought.	Physical bilateral contract quantity of <i>energy</i> in MWh bought by <i>buying market participant</i> 'k' from <i>selling market participant</i> 's' at <i>RWM</i> or <i>intertie metering point</i> 'm' for each <i>metering interval</i> 't' in <i>settlement hour</i> 'h'.
$BCQ_{k,b,h}^{m,t}$	Physical Bilateral Contract Quantity of Energy sold.	Physical bilateral contract quantity of <i>energy</i> in MWh sold by <i>selling market participant</i> 'k' to <i>buying market participant</i> 'b' at <i>RWM</i> or <i>intertie metering point</i> 'm' for each <i>metering interval</i> 't' in <i>settlement hour</i> 'h'.

The submission of *physical bilateral contract data* is governed by section 2.4 of Chapter 8 of the *IESO market rules*. Furthermore, section 2.3 of Chapter 8 describes 2 distinct "forms" of *physical bilateral contract data* that may be submitted by the *selling market participant*. Specifically, the two forms of such data are as follows:

- Absolute quantities:** specifying the absolute quantity of *energy* in MWh sold by the *selling market participant* to the *buying market participant* for each *settlement hour* at a particular *delivery point* or *intertie metering point*; and
- Derived quantities***:** specifying that the *physical bilateral contract quantity* shall be 100% of the *energy* sold by the *selling market participant* to the *buying market participant* for each *settlement hour* as derived from a particular *delivery point* value (i.e. NOT an *intertie metering point*).

Where:

- The *delivery point* chosen by the *selling market participant* must belong to either the *selling market participant* or the *buying market participant*.
- If the *delivery point* is designated as a sub-type 'I' (injection) *delivery point*, 100% of all injected *energy* for each *metering interval* in each applicable *settlement hour* shall be used regardless of any *physical allocation data*.
- If the *delivery point* is designated as a sub-type 'W' (withdrawal) *delivery point*, 100% of all withdrawn *energy* for each *metering interval* in each applicable *settlement hour* shall be used regardless of any *physical allocation data*.

***** Refer to Table 3-6 to Table 3-9 for examples of derived quantities.**

Table 3-7: Derived Quantities Example 1

Derived Quantities Example 1: <i>Delivery point belongs to the SELLING market participant and is a sub-type 'I' (injection) delivery point.</i> (note parity with EXAMPLE 3)

BCQ value used for settlement purposes (for both the <i>buying</i> and <i>selling market participant</i>)	0	0	0	0	0	0	10	10	0	0	0	0
Total Quantity for the hour	20 (REFER TO SECTION 3.5.3 FOR THE DATA PRESENTATION OF THE BILATERAL CONTRACT QUANTITY)											

3.5.3. Time Resolution of Bilateral Contract Quantities and Rounding

Where a *physical bilateral contract* takes place at a non-dispatchable *delivery point*, the *Physical Bilateral Contract Quantity* of Energy Bought is reported by *settlement hour* as per the *market rules* (because the *Hourly Ontario Energy Price* is applied to this quantity – refer to Chapter 9, section 3.3). At the same location however, the ‘Physical Bilateral Contract Quantity of Energy Sold’ is debited at the 5-minute energy market price. This latter, sold quantity must therefore be divided into 12, equal *metering intervals* (refer to Chapter 9, section 3.1.6 of the *market rules*) and rounded to the appropriate number of significant digits (refer to [section 3.4](#) of this document). As a result, the summation of these 12, equal quantities may not equal the original, hourly value submitted in some circumstances due to this intermediate rounding. The table below summarizes this phenomenon in terms of the location sub-type and the applicable *charge type* used. Refer to [section 3.4](#) of this document for further details.

Table 3-11: Time Resolution of Bilateral Contract Quantities and Rounding

		Location Type	Charge Type	Time Resolution used for Settlements Purposes	Intermediate Rounding Applied within Settlements System?
BCQ_{s,k,h^{m,t}}	Physical Bilateral Contract Quantity of Energy bought.	Dispatchable <i>Delivery Point</i> (injection or withdrawal sub-type)	100	by <i>metering interval</i>	Yes – Refer to section 3.4
		Non-Dispatchable <i>Delivery Point</i> (injection or withdrawal sub-type)	101	by <i>settlement hour</i>	No
		<i>Intertie metering point</i>	100	by <i>metering interval</i>	Yes – Refer to section 3.4
BCQ_{k,b,h^{m,t}}	Physical Bilateral Contract Quantity of Energy sold.	Dispatchable <i>Delivery Point</i> (injection or withdrawal sub-type)	100	by <i>metering interval</i>	Yes – Refer to section 3.4
		Non-Dispatchable <i>Delivery Point</i> (injection or withdrawal sub-type)	101	by <i>metering interval</i>	Yes – Refer to section 3.4
		<i>Intertie metering point</i>	100	by <i>metering interval</i>	Yes – Refer to section 3.4

3.5.4. Allocation of Hourly Uplift Components Between Buying and Selling Market Participants

Hourly uplift is defined in section 3.9.1 of Chapter 9 of the *IESO market rules* and may be “disaggregated” (sic) on *settlement statements* into its component parts as per section 3.9.2. The following components *hourly uplift* charges may be allocated from the

buying market participant to the selling market participant as per the physical bilateral contract data submitted by the selling market participant (refer to also, IESO market rules, Chapter 8, section 2.2.2).

Table 3-12: Allocation of Hourly Uplift Components Between Buying and Selling Market Participants

Hourly Uplift Component Group	Associated Charge Types	Comments
Net Energy Market Settlement Credit (NEMSC) Hourly Uplift Component (also known as the "Losses" component)	150	<ul style="list-style-type: none"> This hourly uplift component is an aggregation of <i>charge types</i> 100 (NEMSC), 101 (NEMSC), 104 (TRSC), and 103 (TCRF). The aggregation of these <i>charge types</i> mathematically resolves down to the value of the difference between AQEI, AQEW, SQEW and SQEI quantities valued at the 5-minute Energy Market Reference Price ($EMP_n^{REF,t}$) for each <i>metering interval</i> in the <i>settlement hour</i>.
Operating Reserve Settlement Credit (ORSC) Hourly Uplift Component	250 252 254	<ul style="list-style-type: none"> Separate <i>charge types</i> for recovery of ORSC <i>settlement amounts</i> paid to <i>market participants</i> for each class of <i>operating reserve</i>.
Intertie Failure Charge Rebate (IFCR) Hourly Uplift Component	186	<p>Two components as follows:</p> <ol style="list-style-type: none"> <i>Charge type</i> 186: an aggregation of <i>charge types</i> 135 (Real-time Import Failure Charge), 136 (Real-time Export Failure Charge), 1134 (Day-Ahead Linked Wheel Failure Charge, 1135 (Day-Ahead Import Failure Charge) and 1136 (Day-Ahead Export Failure Charge). These <i>charge types</i> are primarily rebates back to <i>market participants</i> for amounts collected under these charges.
Congestion Management Settlement Credit (CMSC) Hourly Uplift Component	155	<ul style="list-style-type: none"> Includes recovery of CMSC payments for <i>energy</i> and each class of <i>operating reserve</i>.
Transmission Rights Settlement Credit (TRSC) Hourly Uplift Component	NOT USED	<ul style="list-style-type: none"> INCLUDED WITH THE "NET ENERGY MARKET SETTLEMENT CREDIT (NEMSC) Hourly Uplift COMPONENT". REFER TO NOTE ABOVE.
Transmission Charge Reduction Fund (TCRF) Hourly Uplift Component	NOT USED	<ul style="list-style-type: none"> INCLUDED WITH THE "NET ENERGY MARKET SETTLEMENT CREDIT (NEMSC) Hourly Uplift COMPONENT". REFER TO NOTE ABOVE.

Hourly Uplift Component Group	Associated Charge Types	Comments
Operating Reserve Shortfall Settlement Debit (ORSSD) Hourly Uplift Component	201 203 205	<ul style="list-style-type: none"> Separate <i>charge types</i> for distribution of ORSSD <i>settlement amounts</i> received from <i>market participants</i> for shortfalls in the provision of each class of <i>operating reserve</i>.

Each hourly uplift component group (i.e. not the individual *charge types* themselves) may be selected in any combination when the *physical bilateral contract data* is submitted by the *selling market participant*. Confirmation of this selection is included within the *settlement statement* supporting data files (type "B" records). A schematic overview of the format of type "B" records may be found within Table 3-2 of the *IESO's* Technical Interface Document entitled, "Format Specification for Settlement Statement Files and Data Files".

The effect of selecting an hourly uplift component group within *physical bilateral contract data*, is the creation of a "Reallocate Quantity (RQ)".

The RQ specific to a single *physical bilateral contract* is exactly equal to the quantity of *energy* involved in the contract itself.

The RQ specific to a single *market participant* is equal to the sum of all RQ quantities for which the *market participant* is the *selling market participant*, minus the sum of all RQ quantities for which the *market participant* is the *buying market participant*.

The RQ specific to a single *market participant* for a particular hourly uplift component group is equal to the sum of all RQ quantities designated to for that particular hourly uplift component group within *physical bilateral contract data* for which the *market participant* is the *selling market participant*, minus the sum of all RQ quantities for which the *market participant* is the *buying market participant*.

This RQ quantity is then applied to the calculation of the *settlement amounts* for each *charge type* associated with the hourly uplift component group as per the table above.

Therefore, when calculating the RQ quantity for a particular hourly uplift *charge type* for *market participant* 'k' at a particular location 'm' during a particular *metering interval* 't', the quantity may be expressed as follows:

$$RQ_{k,h}^{m,t} = \sum_{s,b} [BCQ_{k,b,h}^{m,t} - BCQ_{s,k,h}^{m,t}]$$

Where all variables are defined as per [section 3.1](#).

The RQ quantity is then used to either augment or decrease the *settlement amount* for the hourly uplift *charge type* "c" as follows:

$$\sum_c^{M,T} TD_{k,h,c} \times [(AQEW_{k,h}^{m,t} + SQEW_{k,h}^{i,t} + RQ_{k,h}^{m,t}) / \sum_k^{M,T} (AQEW_{k,h}^{m,t} + SQEW_{k,h}^{i,t})]$$

Where all variables are defined as per [section 3.1](#).

In the event that the term,

$$(AQEW_{k,h}^{m,t} + SQEW_{k,h}^{i,t} + RQ_{k,h}^{m,t}) < 0$$

Where:

$$RQ_{k,h}^{m,t} < 0 \text{ and } |RQ_{k,h}^{m,t}| > |(AQEW_{k,h}^{m,t} + SQEW_{k,h}^{i,t})| \text{ and } TD_{k,h,c} > 0$$

The calculation of the applicable hourly uplift charge type “c” will yield a net credit to the *buying market participant* as a result of the reallocated quantity exceeding their actual/scheduled withdrawals of *energy* for the *metering interval* ‘t’ in question.

The above mechanism applies to those “associated charge types” that are enumerated in the table at the beginning of this section. Refer to [section 3.2](#) for specific listings of charge types and their respective equations.

3.6. Exemptions from the Day-Ahead Import Failure Charge, Day-Ahead Export Failure Charge, and Day-Ahead Linked Wheel Failure Charge

3.6.1. Purpose of this Section

This section describes how Day-Ahead Import transactions are subject to an “Offer Price Test” in order to determine if they are exempt from the Day-Ahead Import Failure Charge (*charge type* 1135), Day-Ahead Export Failure Charge (*charge type* 1136) and Day-Ahead Linked Wheel Failure Charge (*charge type* 1134)⁴.

Generally speaking the applicability of the five Intertie Failure charges⁵ is affected by the “Reason Codes” attached to the applicable *interchange schedule* received by the *settlement process*. The impact of these Reason Codes is outlined in Table 3-5 of the *IESO* Technical Interface document entitled, “Format Specifications for Settlement Statement Files and Data Files” (IMP_SPEC_0005). As noted in that table however, day-ahead import transactions arranged in the *pre-dispatch-of-record* that include the ‘AUTO’NY90’ or ‘ADQh’, or ‘ORA’ Reason Codes in the resulting real-time dispatch will be further subject to an “Offer Price Test” which determines whether or not the transaction in question is in fact exempt from the Day-Ahead Failure Charges.

3.6.2. Objective of the “Offer Price Test”

The main objective of the Offer Price Test is to grant an exemption from the DA-IFC, DA-EFC and DA-LWFC for those import and export transactions that make a best effort to ensure that they are scheduled in the *real-time market*. The Offer Price Test assesses “best effort” on the basis of the offer price of the transaction itself.

3.6.3. How the Offer Price Test Works

The Offer Price Test is a simple test that is performed on the first lamination of the *real-time market* import *offer*/or export *bid*. The “first lamination” is defined by the first two *price-quantity* (“p-q”) *pairs* in the *real-time market offer curve*, where:

- The first *price-quantity pair* contains an *offer* or *bid* price and a quantity of zero; and
- The second *price-quantity pair* contains the same *offer* or *bid* price as the first *price-quantity pair* and a non-zero quantity.

⁴ The price test for the Day-Ahead Linked Wheel Failure Charge (1134) is used to determine exemption from the RT-EFC-DALW and RT-IFC-DALW portions only.

⁵ Specifically, the Real-time Import Failure Charge (*charge type* 135), the Real-time Export Failure Charge (*charge type* 136), the Day-Ahead Import Failure Charge (*charge type* 1135), the Day-Ahead Export Failure Charge (*charge type* 1136) and the Day-Ahead Linked Wheel Failure Charge (*charge type* 1134).

The Offer Price Test applies to any situation in which a day-ahead import or export transaction has a Reason Code, 'AUTO', 'NY90' 'ADQh', or 'ORA' assigned to the corresponding real-time import or export transaction at the same location. It is applicable to *any intertie metering point* where the underlying constrained scheduling point (CSP) is a "source" (i.e. applicable to imports only) or a "sink" (i.e. applicable to exports only).

If the transaction fails this test; it will not receive exemption status from the DA-IFC or DA-EFC. If the transaction passes this test, then it will be exempted from the DA-IFC or DA-EFC – without actually changing the Reason Code itself.

3.6.4. Input Data:

- DA_DQSI_{k,h}^{i,t} = Day-ahead constrained quantity scheduled for injection by *market participant* 'k' at *intertie metering point* 'i' during *metering interval* 't' of *settlement hour* 'h'
- PD_DQSI_{k,h}^{i,t} = *Pre-dispatch* constrained quantity scheduled for injection by *market participant* 'k' at *intertie metering point* 'i' during *metering interval* 't' of *settlement hour* 'h'.
Energy offers submitted in Pre-dispatch, represented as an N by 2 matrix of *price-quantity pairs* for each *market participant* 'k' at *intertie metering point* 'i' during *metering interval* 't' of *settlement hour* 'h' arranged in ascending order by the offered price in each *price quantity pair* where offered prices 'P' are in column 1 and offered quantities 'Q' are in column 2
- PD_BE_{k,h}^{i,t} = *Energy offers* submitted in Pre-dispatch, represented as an N by 2 matrix of *price-quantity pairs* for each *market participant* 'k' at *intertie metering point* 'i' during *metering interval* 't' of *settlement hour* 'h' arranged in ascending order by the offered price in each *price quantity pair* where offered prices 'P' are in column 1 and offered quantities 'Q' are in column 2
- MMCP = The *Minimum Market Clearing Price*.
- DA_DQSW_{k,h}^{i,t} = Day-ahead constrained quantity scheduled for withdrawal by *market participant* 'k' at *intertie metering point* 'i' during *metering interval* 't' of *settlement hour* 'h'
- PD_DQSW_{k,h}^{i,t} = *Pre-dispatch* constrained quantity scheduled for withdrawal by *market participant* 'k' at *intertie metering point* 'i' during *metering interval* 't' of *settlement hour* 'h'.
Energy bids submitted in *pre-dispatch*, represented as an N by 2 matrix of *price-quantity pairs* for each *market participant* 'k' at *intertie metering point* 'i' during *metering interval* 't' of *settlement hour* 'h' arranged in ascending order by the offered price in each *price quantity pair* where offered prices 'P' are in column 1 and offered quantities 'Q' are in column 2
- PD_BL_{k,h}^{i,t} = *Energy bids* submitted in *pre-dispatch*, represented as an N by 2 matrix of *price-quantity pairs* for each *market participant* 'k' at *intertie metering point* 'i' during *metering interval* 't' of *settlement hour* 'h' arranged in ascending order by the offered price in each *price quantity pair* where offered prices 'P' are in column 1 and offered quantities 'Q' are in column 2
- +MMCP = The *Maximum Market Clearing Price*.

3.6.5. Decision Logic Applied During the Offer Price Test for Import

PART 1:

The first part of the test ensures that the original *schedule-of-record* schedule ($DA_DQSI_{k,h,t}$) for the import transaction is indeed GREATER THAN the resulting *Pre-dispatch schedule* ($PD_DQSI_{k,h,t}$) over the course of *settlement hour* 'h'.

IF $\sum^T DA_DQSI_{k,h,t} > \sum^T PD_DQSI_{k,h,t}$

THEN

 Proceed to PART 2

ELSE

 END of the test for this transaction.

PART 2:

The second part of the test ensures that the first lamination (i.e. as defined by the first 2 *price-quantity* pairs) of the offer curve submitted into the *pre-dispatch scheduling process*:

- 1) Was large enough to cover the entire quantity of the transaction originally scheduled by the *schedule-of-record* at the same *market participant/intertie metering point* combination (commonly referred to as a "MP/MSP/CSP triplet"); and,
- 2) Was offered at the *Minimum Market Clearing Price (-MMCP)*.

The test is as follows:

For each *metering interval* 't' at *intertie metering point* 'i' where the transaction passed PART 1 for *settlement hour* 'h':

 Let 'B' be matrix $PD_BE_{k,h,t}$ (refer to above for definition).

 IF $B[2,2] \geq DA_DQSI_{k,h,t}$ AND $B[2,1] = -MMCP$

 THEN

 Allow Reason Code to remain as-is, but exempt the transaction from the DA-IFC.

 ELSE

 Allow Reason Code to remain as-is, and do NOT exempt the transaction from the DA-IFC.

Implications:

- A day-ahead import transaction must be constrained down to a level lower than its original *schedule-of-record* schedule in order to receive exemption status;
- The entire amount of the constrained portion of the transaction must have been offered into the *Pre-dispatch* at $-MMCP$ in order to receive exemption status (compare Figures 3-1 and 3-2 to refer to examples where this condition is met and not met respectively); and
- Only the first lamination (i.e. the first 2 p-q pairs) of the Pre-dispatch offer curve for each import transaction are relevant in performing this test (due to the existing market rule requirement that offer prices must be monotonically increasing).

3.6.6. Decision Logic Applied During the Offer Price Test for Export Transactions:

PART 1:

The first part of the test ensures that the original *schedule-of-record* ($DA_DQSW_{k,h}^{i,t}$) for the export transaction is indeed GREATER THAN the resulting *Pre-dispatch schedule* ($PD_DQSW_{k,h}^{i,t}$) over the course of *settlement hour* 'h'.

IF $\sum^T DA_DQSW_{k,h}^{i,t} > \sum^T PD_DQSW_{k,h}^{i,t}$

THEN

Proceed to PART 2

ELSE

END of the test for this transaction.

PART 2:

The second part of the test ensures that the first lamination (i.e. as defined by the first 2 *price-quantity pairs*) of the offer curve submitted into the *Pre-dispatch scheduling process*:

- 1) Was large enough to cover the entire quantity of the transaction originally scheduled by the *schedule-of-record* at the same *market participant/intertie metering point* combination (commonly referred to as a, "MP/MSP/CSP triplet"); and,
- 2) Was offered at the *Maximum Market Clearing Price (+MMCP)*.

The test is as follows:

For each *metering interval* 't' at *intertie metering point* 'i' where the transaction passed PART 1 for *settlement hour* 'h':

Let 'B' be matrix $BL_{k,h}^{i,t}$ (refer to above for definition)

IF $B[2,2] \geq DA_DQSW_{k,h}^{i,t}$ AND $B[2,1] = +MMCP$

THEN

Allow Reason Code to remain as-is, but exempt the transaction from the DA-EFC.

ELSE

Allow Reason Code to remain as-is, and do NOT exempt the transaction from the DA-EFC.

Implications:

- A day-ahead export transaction must be constrained down to a level lower than its original *schedule-of-record* in order to receive exemption status;
- The entire amount of the constrained portion of the transaction must have been offered into the *Pre-dispatch* at *+MMCP* in order to receive exemption status (compare Figures 3-1 and 3-2 to refer to examples where this condition is met and not met respectively); and
- Only the first lamination (i.e. the first 2 p-q pairs) of the Pre-dispatch offer curve for each export transaction are relevant in performing this test (due to the existing *market rule* requirement that *offer* prices must be monotonically decreasing).

3.6.7. Decision Logic Applied During the Offer Price Test for Linked Wheel Transactions:

The test seeks to demonstrate a best efforts attempt to schedule both the import and export legs of a day-ahead linked wheel (DALW) transaction through both:

- A Pre-dispatch bid at positive maximum market clearing price (+MMCP) for a quantity at least equal to the day-ahead export quantity, and
- A Pre-dispatch offer at negative maximum market clearing price (–MMCP) for a quantity at least equal to the day-ahead import quantity.

For import leg of the linked wheel, the decision logic for the price test is described in section 3.6.5 with the following amendment:

For each *metering interval* 't' at *intertie metering point* 'i' where the transaction passed PART 1 for *settlement hour* 'h':

Let 'B' be matrix $PD_BE_{k,h}^{i,t}$ (refer to above for definition).

IF $B[2,2] \geq DA_DQSI_{k,h}^{i,t}$ AND $B[2,1] = -MMCP$

THEN

Allow Reason Code to remain as-is, but exempt the transaction from the **RT-IFC-DALW**.

ELSE

Allow Reason Code to remain as-is, and do NOT exempt the transaction from the **RT-IFC-DALW**.

For export leg of the linked wheel, the decision logic for the price test is described in section 3.6.6 with the following amendment:

For each *metering interval* 't' at *intertie metering point* 'i' where the transaction passed PART 1 for *settlement hour* 'h':

Let 'B' be matrix $BL_{k,h}^{i,t}$ (refer to above for definition).

IF $B[2,2] \geq DA_DQSW_{k,h}^{i,t}$ AND $B[2,1] = +MMCP$

THEN

Allow Reason Code to remain as-is, but exempt the transaction from the **RT-EFC-DALW**.

ELSE

Allow Reason Code to remain as-is, and do NOT exempt the transaction from the **RT-EFC-DALW**.
