Subject: hello

Dear Mr. Chuck Farmer,

I am writing concerning Phasing -Out Ontario's Gas Fired power plants. Personally ,and our group 350.org are incredibly pleased that IESO is doing a study on Phasing Out Gas Fired plants here in our Province of Ontario.it is one of the most promising studies that are being done to look @ reducing Green House Gases.Our province being the largest and most populated province ,this would be a winner if your study proves it is possible ,and would be the much needed Reduction of Green House Gases that are causing so much harm to the planet.Climate Change affects us as all as human beings, we just cannot do the wait and see , we already know. I realize that the move on your part is only part of the picture in this disastrous scenario, but it is so necessary. As part of the Clean Air Alliance of Ontario we are looking @ the IESO to move in a positive direction to lead the way to a healthier habitat for the near future ,and for our children who follow us.

Thank you for giving us hope for better things to come.
Sincerely , Jane Evans
