Subject: Two questions from your presentation today

Dear Sir or Madam,

I asked a question using the Q&A function during your presentation today that was not answered. I also “put my hand up” for a different oral question but “took it down” because I wanted to be more certain of what I was asking about. One of the presenters said that we could ask unanswered questions by email. My two questions are:

1. One of the presenters stated that the use of a specific fuel type for generating electricity is governed by regulations at the federal and provincial level. What is the specific Ontario provincial act and regulation(s) that govern the use of a specific fuel type? (I am aware of the federal Greenhouse Gas Pollution Pricing Act (the “GGPPA”) and its regulations, but I do not know about the relevant provincial acts and regulations.)
2. One of the presenters stated that the “\$170 per tonne carbon price” will be factored in to your cost assessments. However, under GGPPA Output-Based Pricing System and the regulations thereto, gas generations plants built before 2021 are effectively “grandfathered” and pay no “carbon price” Will your cost assessment assume that these gas plants continue to pay no carbon price or will it assume that they must pay the carbon price?

I have no interest in arguing with you. I am simply seeking information.

Thank you for the presentation today. I found it very interesting. Thank also for considering these two questions. I hope to hear back from you.

Best Wishes,

Ken Love
