Subject: Feedback - Gas Phase-Out Impact Assessment

To Independent Electricity Systems Operator,

Ontario must phase out gas-fired electricity in Ontario by 2030 in order to reach critical climate goals. Any increase in the use of gas-fired electricity will worsen our deepening climate crisis. There are better, low-cost ways to generate electricity including wind, solar, and Quebec hydro power. Ontario won't meet even its current weak climate targets if it allows a huge increase in gas plants. The vast majority of current gas-plant contracts will expire by 2030, so it's the perfect time to phase out gas.

It is urgent that you do this for future generations and to save our beautiful planet.

Yours truly,

Lynn McIntyre
