**Subject:** Greenhouse Power

Hello

I believe there may be some significant understatement regarding the power generation demand in the greenhouse area. In our case, we have not provided or submitted a full power demand forecast, we rely on onsite power generation, like many other greenhouses in the area.

As carbon taxes rise over the next 10 years, there will be a specific drive to divert from natural gas generation to grid power generation as economics drive the diversion.

A specific drive to canvas the greenhouses in the Leamington and southwestern Ontario area about their power generation plan and preferences will provide a better perspective about potential needs.

Thanks.
