Subject: Feedback - Gas Phase-Out Impact Assessment

To Independent Electricity Systems Operator,

Ontario needs to phase out gas-fired electricity within nine years. It is the only way we will meet crucial climate goals. Instead, Ontario can use low cost methods to generate electricity such as wind, solar and hydro power from Quebec. Ontario must follow the lead of both the UK & the USA in transitioning to zero carbon systems. Since most of the gas fired plant contracts will expire by 2030 thus it is a perfect time to replace them with a clean green electrical source.

Yours truly,

Rosanne Iland
