Subject: Input for study

Hello,

I strongly support the phase out of gas fired electricity generation given the other options that are available that do not contribute to raising our GHG emissions. I hope the study being conducted will:

- 1) have the objective of reducing Ontario's GHG emissions to 2017 levels immediately and phasing out of gas fired generation by 2030
- 2) be a comprehensive, fact based and unbiased assessment
- 3) provide a sound technical basis for subsequent policy decisions

Key to note that just over 50% of Ontario's population is represented by municipalities that support this phase out.

Thank You,

Tom Shea
