

Feedback Form

Long-Term 2 RFP – April 21, 2026

Feedback Provided by:

Name: Richard Carlson

Title: Director, Energy

Organization: Pollution Probe

Email: [REDACTED]

Date: May 8, 2026

To promote transparency, feedback submitted will be posted on the Long-Term 2 RFP engagement page unless otherwise requested by the sender.

- NO - There is confidential information, do not post**
- YES - Comfortable to publish to the IESO web page**

Following the April 21st Long-Term 2 RFP engagement webinar, the Independent Electricity System Operator (IESO) is seeking feedback from stakeholders on the items discussed. The presentation and recording can be accessed from the [Long-Term Procurement engagement webpage](#).

Note: The IESO will accept additional materials where it may be required to support your rationale provided below. When sending additional materials, please indicate if they are confidential.

Please submit feedback to engagement@ieso.ca by May 8, 2026.

Transparency and Information Disclosure

The IESO should publish standardized, non-sensitive metrics along with clear reasons for non-selection. Doing so would add meaningful value to the process by improving transparency and enabling proponents to better understand evaluation outcomes. There is a lot of uncertainty about municipal engagement, and how to establish how it will be measured and best practices. Having an idea of where and how projects were successful would increase the capacity of the industry in general to improve public engagement.

While there is some risk for unsuccessful proponents, the value of having additional information being made available will make it more likely that an unsuccessful applicant could become successful by understanding what gaps in their proposal may or may not have been present. In addition, as their proposal was unsuccessful, and would change in the future, it is unlikely to be deleterious to applicants.

General Comments/Feedback

Pollution Probe commends the IESO on the success of the LT2 RFP. It is clear that the IESO was able to hold a successful RFP and to identify applicants that meet the requirements.

It is also important that the IESO focuses on how repowering facilities can be accomplished. Repowering would allow for the greatest increase in generation with the lowest level of additional impact.

There is always room for improvement and to ensure that applicants are able to submit the highest quality proposals with the least amount of uncertainty. Improving data availability will do this.
