**Subject:** North & East of Sudbury Electricity Plan Posted

The North & East of Sudbury electricity plan – Integrated Regional Resource Plan (IRRP) – that considers electricity demand and supply conditions over the next 20 years, is now [online](#). Responses to feedback received will be posted shortly.

The electricity plan recommends a package of solutions to address emerging needs related to operations and asset renewal identified for this region including:

- Investigate options to improve operability of existing Dymond TS capacitors and adding reactive devices in the Kirkland Lake area;
- Proceed with plans to replace circuits reaching end-of-life in the Iroquois Falls and Cochrane areas with a like-for-like replacement, subject to confirmation before these projects are committed;
- Continued monitoring of load growth at Ramore TS in the Kirkland Lake area in preparation for the next planning cycle; and,
- Investigate and recommend solutions to load security issues in the area north of Timmins in the next iteration of bulk system planning in Northeast Ontario.

For background about the study scope, engagement and details about the North & East of Sudbury region, visit the [engagement webpage](#) and download the full IRRP [report](#).

This concludes our engagement initiative. The IESO appreciates your participation and input received throughout the engagement initiative and looks forward to continuing discussions through the Northeast Regional Electricity Network. Register to join on the [IESO website](#). As a reminder, to stay informed about future electricity planning activities in your region please [subscribe](#) to receive updates.

Please contact [engagement@ieso.ca](mailto:engagement@ieso.ca) if you would like to discuss the North & East of Sudbury IRRP or if you have any questions.
