Subject: Ottawa Area Integrated Regional Resource Plan

The Council of Tay Valley Township is committed to clean energy and has directed the Township Planner to request that the IESO support virtual net metering.

Currently Township residents can only set up net metering on the specific site they own and have a hydro meter.

Virtual net metering would allow PV systems to be installed by anyone in parts of the Township that are not under constraint. It could also allow people to cooperate to install larger, more cost-effective systems.

On the matter of constraint, the Township requests that the IESO raise Hydro One's arbitrary constraint of only allowing solar capacity in any substation up to a limit of 7% of the maximum draw from that substation.

Sincerely,

Noelle Reeve, MCIP, RPP
