Following the February 24 engagement webinar, the Independent Electricity System Operator (IESO) is seeking feedback from stakeholders on the items discussed during the webinar. The webinar presentation and recording can be accessed from the [engagement web page](#).

**Please submit feedback to [engagement@ieso.ca](mailto:engagement@ieso.ca) by March 16.** Please attach research studies or other materials for consideration by the IESO to support your submission.

If you wish to provide confidential feedback, please submit as a separate document, marked "Confidential". Otherwise, to promote transparency, feedback that is not marked "Confidential" will be posted on the engagement webpage.

Are there additional data sources that we should consider	Click or tap here to enter text.
Are there other considerations for the IESO?	Click or tap here to enter text.

## General Comments/Feedback

I believe the IESO study should include scenarios that are more focused on a mix of conservation measures and the energy alternatives of solar, wind and hydro power with gas as a backup energy source in emergency peak situations. Nuclear power should be phased out as the nuclear plants come to their end of life due to the high cost of nuclear power and the environmental waste. Also as a citizen and homeowner, I am concerned about cost and reliability of electricity in the future but as a grandmother, I am more concerned about the type of future we are leaving our children and grandchildren. I realize that the impacts of climate change are out of scope for this study, so I would ask that the IESO consider looking at the effect of climate change on electricity production, supply and demand at another time. Many studies that look at these issues are available through the Science Direct website.
