To promote transparency, feedback submitted will be posted on the Toronto region [engagement webpage](#) unless otherwise requested by the sender.

Following the Toronto Region electricity planning engagement webinar held on April 16, 2024, the Independent Electricity System Operator (IESO) is seeking feedback on the draft electricity demand forecast scenarios and Engagement Plan. A copy of the presentation as well as a recording of the session can be accessed from the [engagement web page](#).

Please submit feedback to engagement@ieso.ca by May 7, 2024.

Topic	Feedback
What additional information, if any, should be incorporated in the proposed electricity demand scenarios? What are some of your key developments, projects or initiatives that should be considered in developing an electricity demand forecast for the Toronto region?	I am writing in support of the request for additional information that was submitted on April 30 by the Ontario Clean Air Alliance. I trust that organization as they have always had the best interests of the people of Ontario, and Toronto, in mind.
What local issues and concerns should be considered in the electricity planning?	As the price of electricity generated by wind, solar and biogas, plus conservation measures is constantly decreasing, and is less than nuclear-generated electricity and electricity generated through the combustion of methane, Toronto must place more reliance on these technologies. In Toronto, there is plenty of roof space, for example, to generate electricity from solar cells. Toronto Hydro has also researched the possibility of placing wind turbines in Lake Ontario, but abandoned that viable project. Now is the time to re-examine a promising local project.
What information is important to provide to participants throughout this engagement?	See the Ontario Clean Air Alliance request.
Does the proposed Engagement Plan provide sufficient scope and opportunities for input?	See the Ontario Clean Air Alliance request.
