To promote transparency, feedback submitted will be posted on this [engagement webpage](#) unless otherwise requested by the sender.

Following the Toronto Region electricity planning engagement webinar held on September 25, 2025, the Independent Electricity System Operator (IESO) is seeking feedback on the options analysis and draft recommendations. A copy of the presentation as well as a recording of the session can be accessed from the [engagement web page](#).

Please submit feedback to engagement@ieso.ca by October 9, 2025.

Topic	Feedback
What feedback is there on the options analysis?	Are modern trends like application of FACTS devices and Dynamic line ratings are taken into consideration which result in deferring the investment of TL and generation.
What feedback is there on the draft recommendations?	The efforts are highly appreciable. There are no word on Protection system. As I understand there are electric mechanical relays as well. If it is then Degree of system Resilience becomes questionable.
What information needs to be considered regarding these draft recommendations?	<u>No comments</u>
What should be considered regarding the third supply line before the regional plan is released?	Facts devices application may reduce cost of TL and elimination if HVDC
How can the IESO continue to engage with communities and stakeholders as these recommendations are implemented, or to help prepare for the next planning cycle?	Its already excellent

General Comments/Feedback

Excellent efforts by IESO . Thanks
